VMS System — Complete User Manual & Documentation

Vinayaka Mission's Research Foundation — Vendor Management System (VMS) Laravel 12 · MySQL · Blade + Tailwind + Alpine.js

This manual documents every screen in the application, organized by user role, the full tender/application/contract lifecycle with flowcharts inline, every automatic email notification the system sends, its readiness for a future mobile app and public website integration, and a genuine **live end-to-end walkthrough** — a real vendor registered, a real tender created and published, a real committee member added, a real application submitted, reviewed, shortlisted and awarded, and a real contract signed, all captured screen-by-screen as it happened on 2026-07-03.

> Static screenshots (§3–§7) were captured against the live database (`vms_db`), so some show real tenders/vendors already in the system. The walkthrough in §13 created new, clearly-labeled demo records — additive only, nothing existing was altered.

Table of Contents

1. System Overview
2. User Roles & Permissions
3. Authentication Screens
4. Admin Manual
5. Tender Owner Manual
6. Vendor Manual
7. Committee Member Manual
8. Tender → Application → Contract Lifecycle (with flowcharts)
9. Automatic Email Notifications
10. Future-Ready: Mobile App & Public Website Integration
11. Data Model
12. Known Issues Found During This Review
13. Live End-to-End Walkthrough
14. Appendix: Test Credentials & Routes

---

1. System Overview

VMS is an end-to-end e-procurement platform: tenders are created and published, vendors browse and bid, applications go through eligibility screening → review → shortlisting → award, and awarded applications become contracts with generated Work/Purchase Orders. Every step notifies the right people automatically by email (§9), and the platform already exposes a public API ready for a future mobile app and a live tender feed on the university website (§10).

Four roles, each with its own dashboard and sidebar (`resources/views/layouts/dashboard.blade.php`):

Role	Scope
Admin	All tenders, vendors, applications, contracts, users, categories org-wide
Tender Owner	Full lifecycle, but scoped to tenders they own (e.g. the Digital Library, a department)
Committee Member	Read/evaluate access to tenders they're assigned to, with granular per-tender permissions
Vendor	Browse published tenders, apply, track applications/contracts, manage company profile

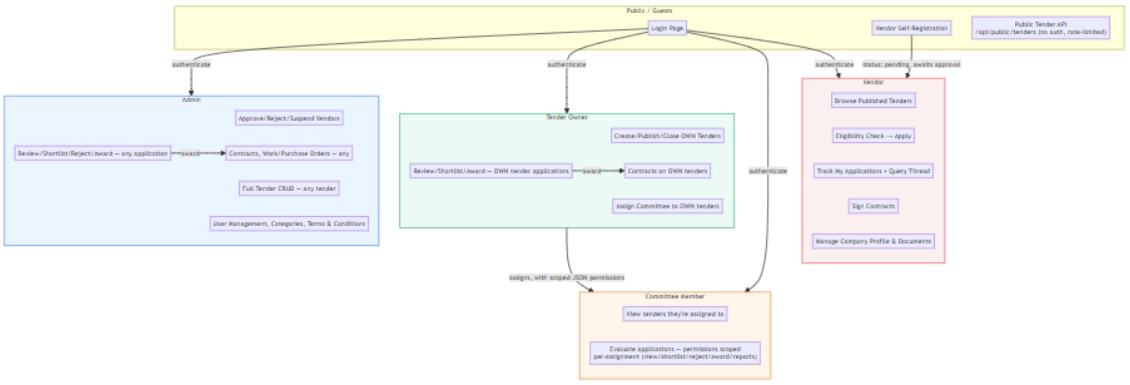

---

2. User Roles & Permissions

Permissions are managed with Spatie Permission (`database/seeders/RolePermissionSeeder.php`), and are live-editable by system administrators. Summary:

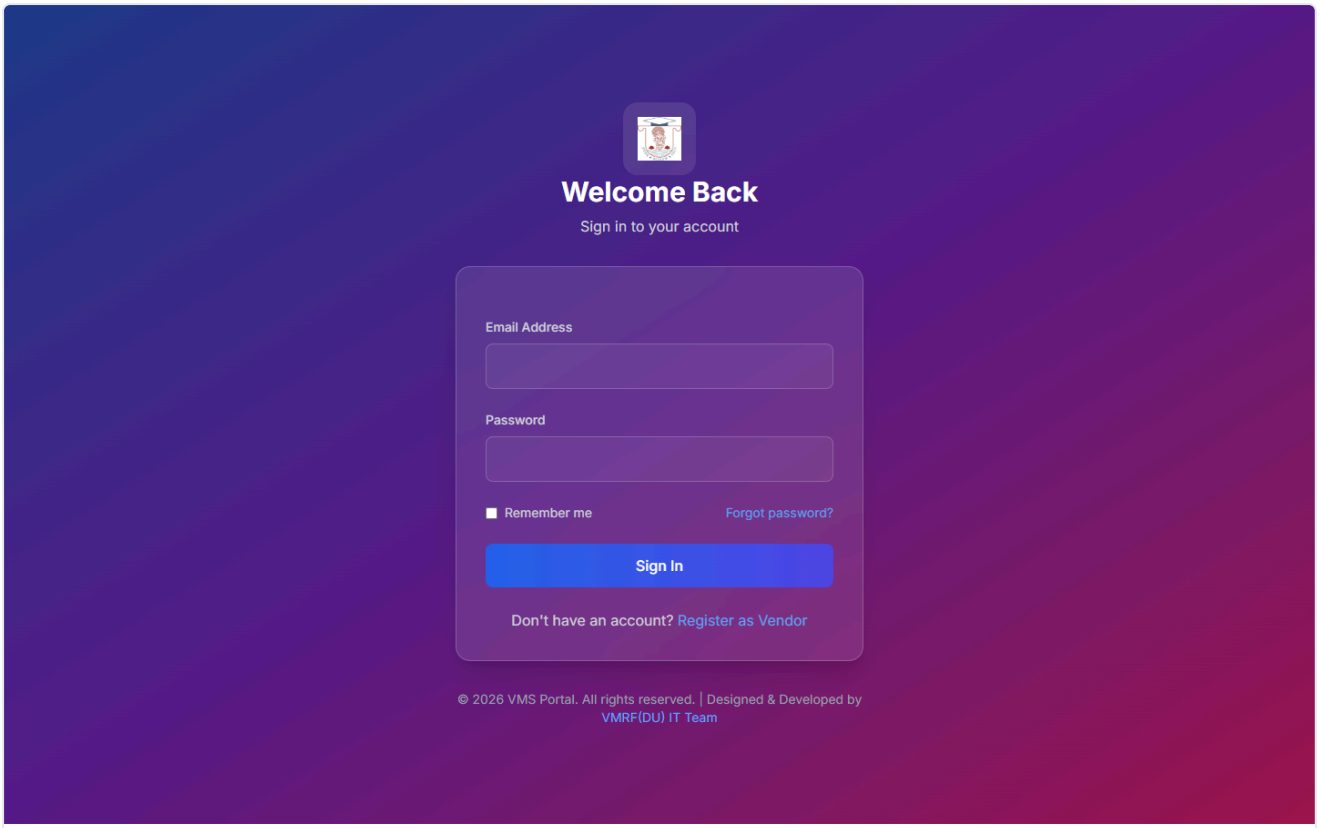

- **admin** — vendor approval; full tender/application/contract CRUD; documents; committee; reports; user management
- **tender-owner** — own-tender CRUD/publish/close; shortlist/reject/award on own tenders; own contracts; committee management; reports
- **vendor** — view published tenders; submit applications; view own applications/contracts; sign contracts
- **committee-member** — assigned per tender via the `tender_committee` pivot table, with a JSON permission set (e.g. `shortlist_applications` , `reject_applications` , `upload_documents`) that can differ per assignment

Below is the visual map of who can do what:

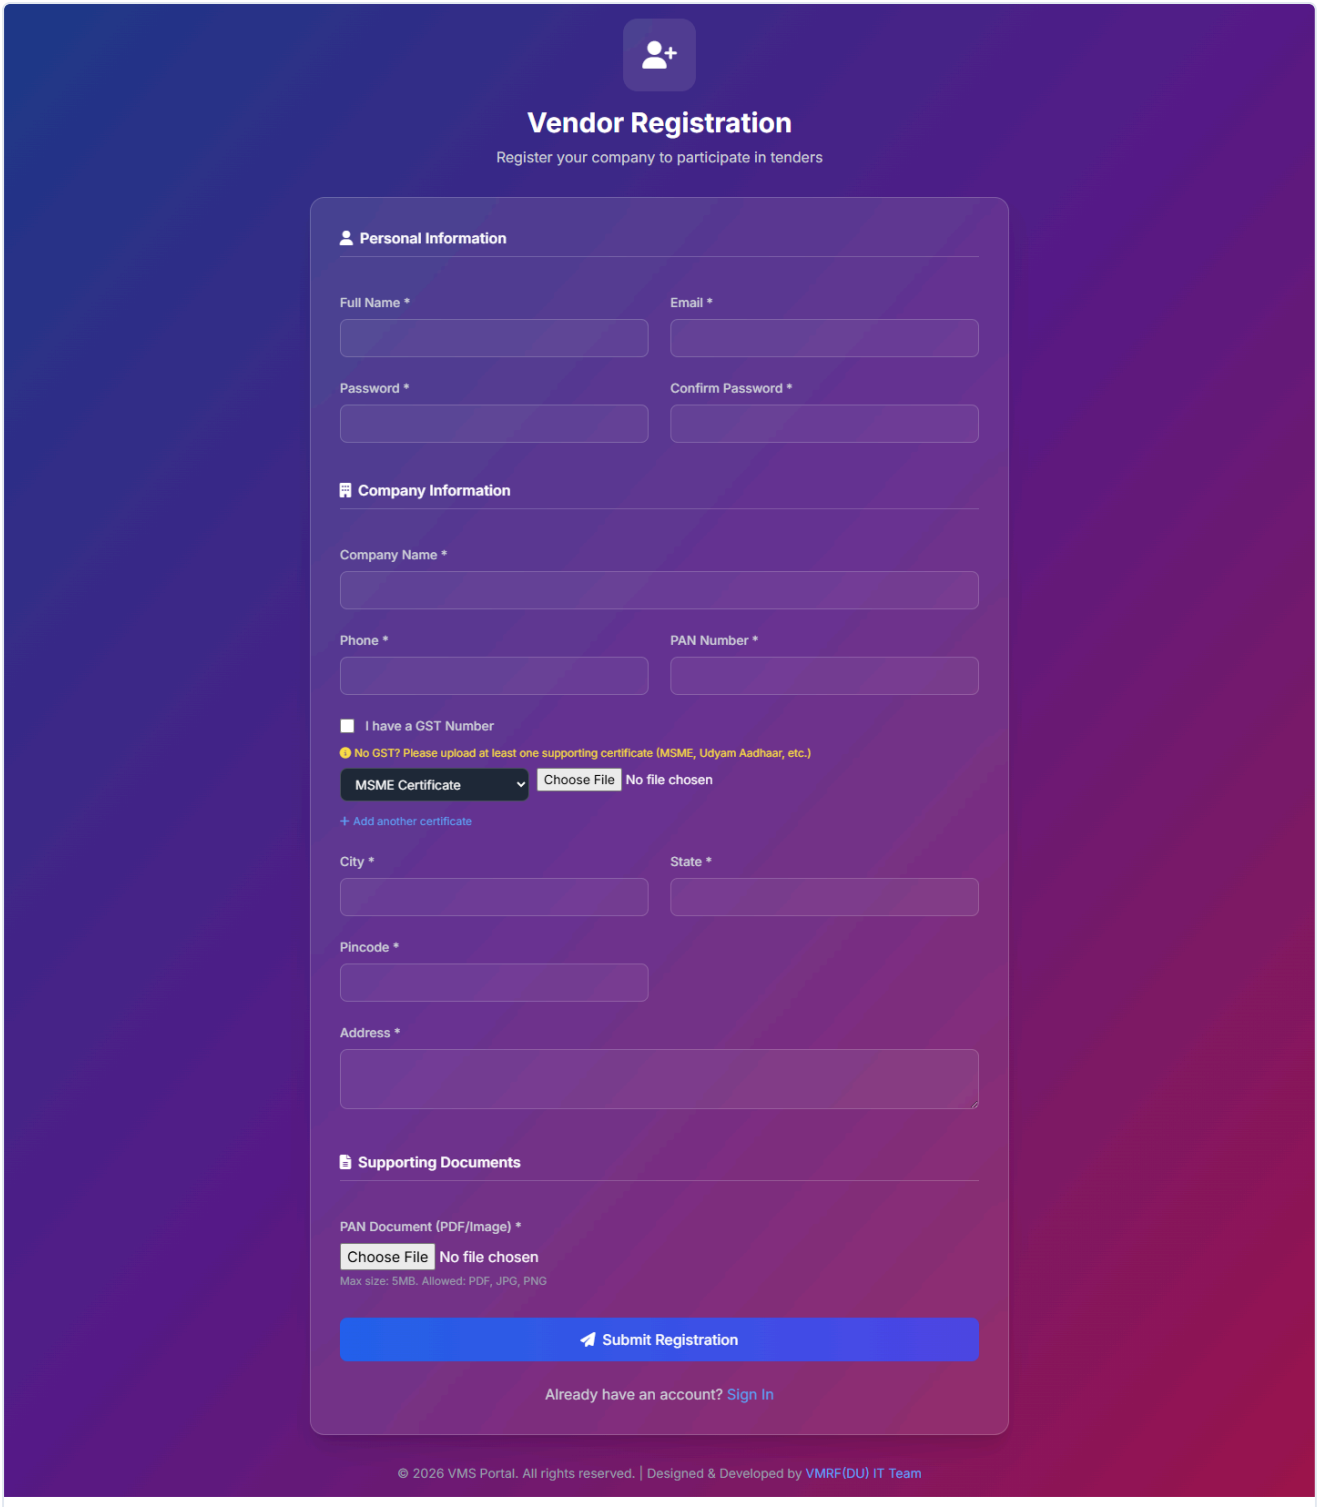

3. Authentication Screens

Login

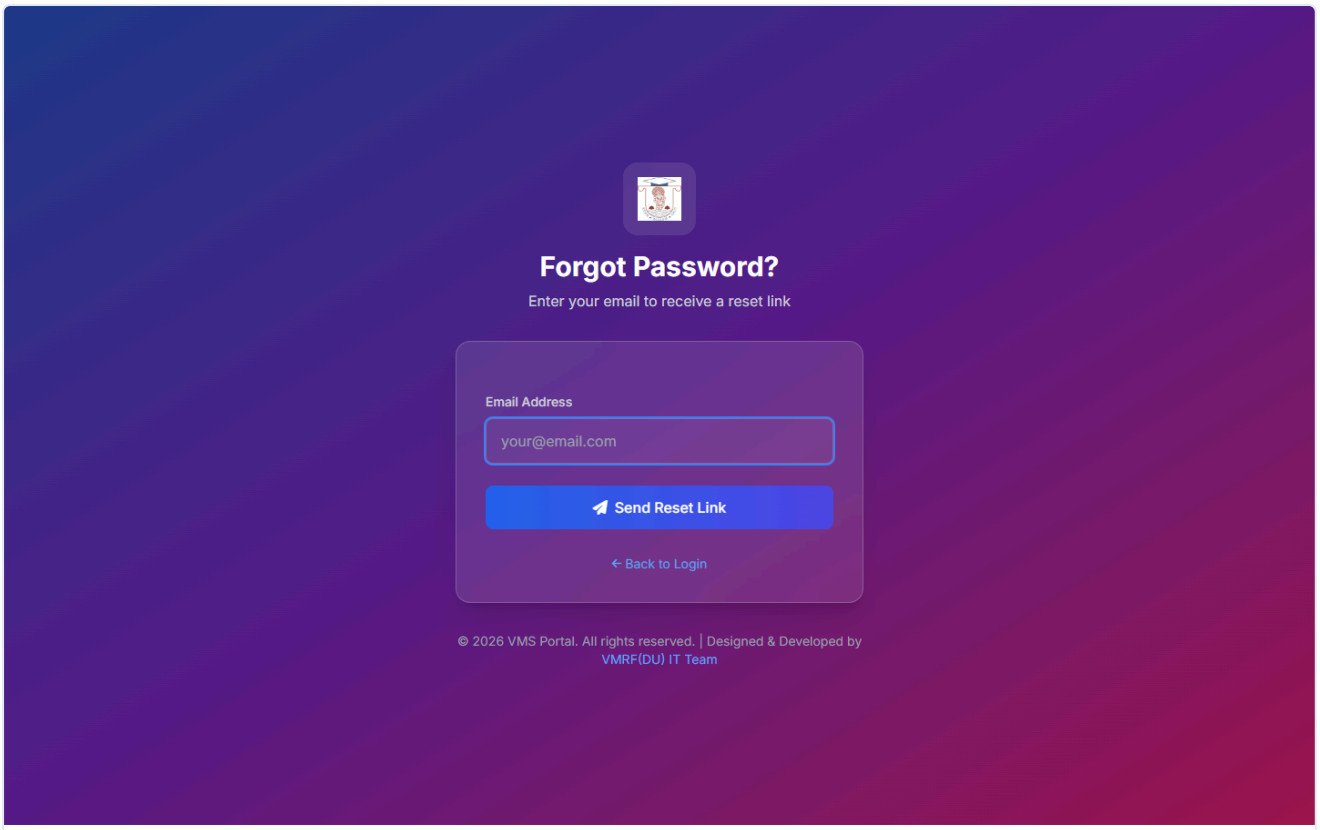

Email + password, "remember me", and a link to password reset. Vendors can self-register from here.

Vendor Self-Registration

New vendors create an account here; the resulting `Vendor` record starts in **pending** status and must be approved before the vendor can apply to tenders. See §13 for this screen used in a real registration.

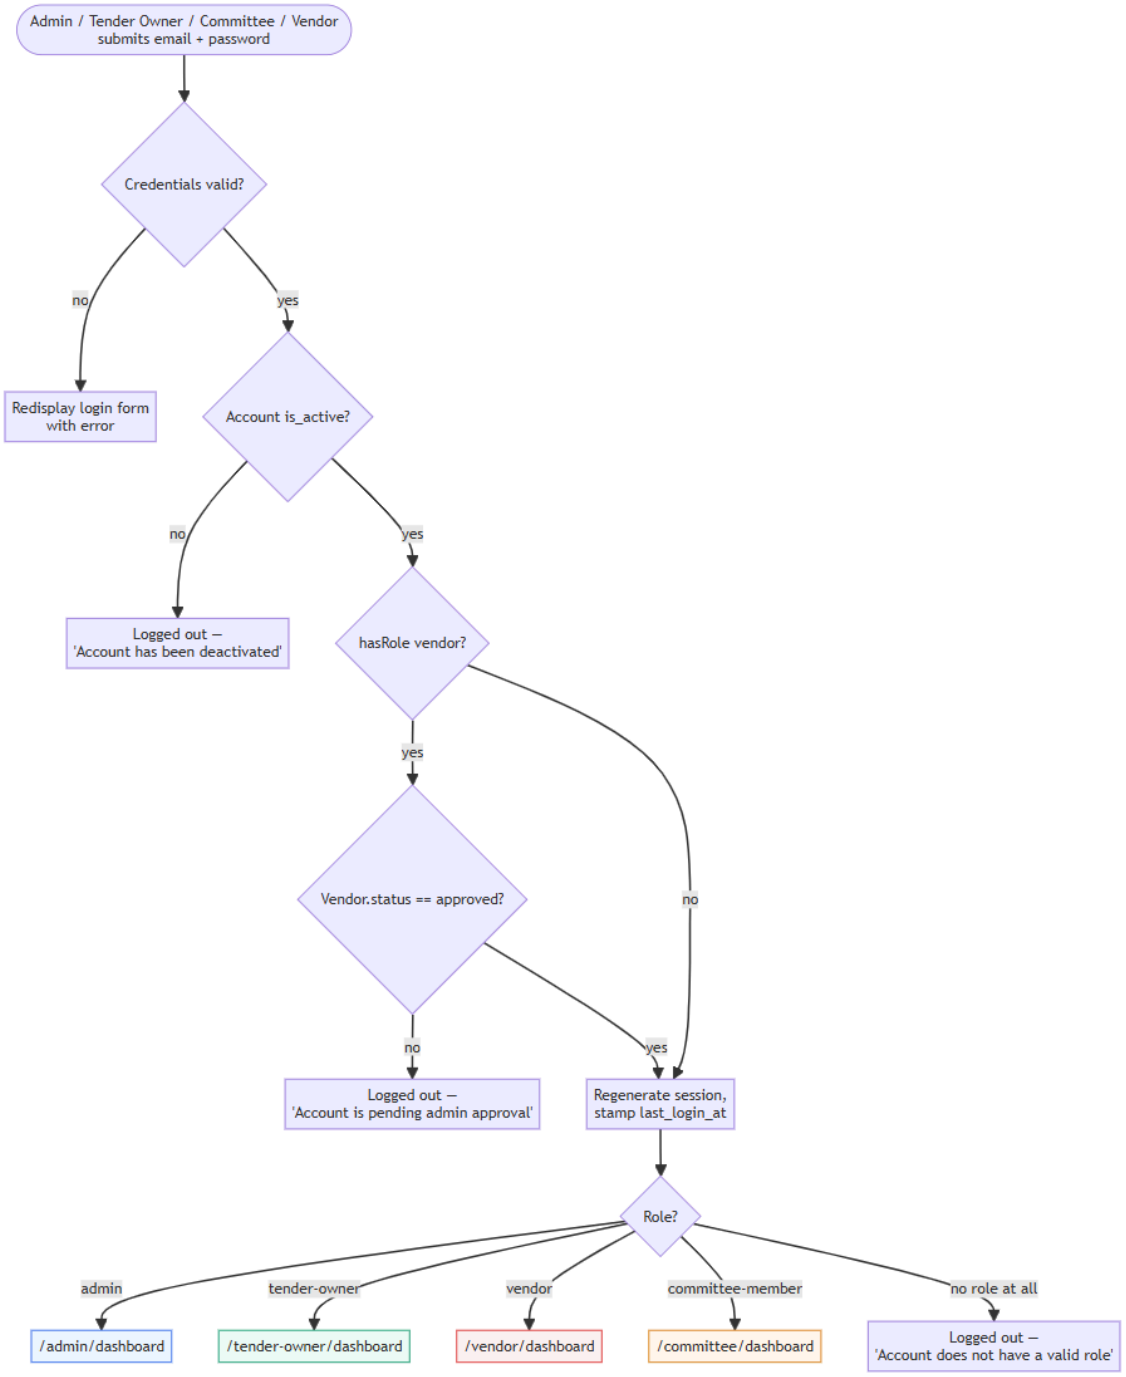

Forgot Password

Sends a reset link by email.

Login & Role-Based Redirect Flow

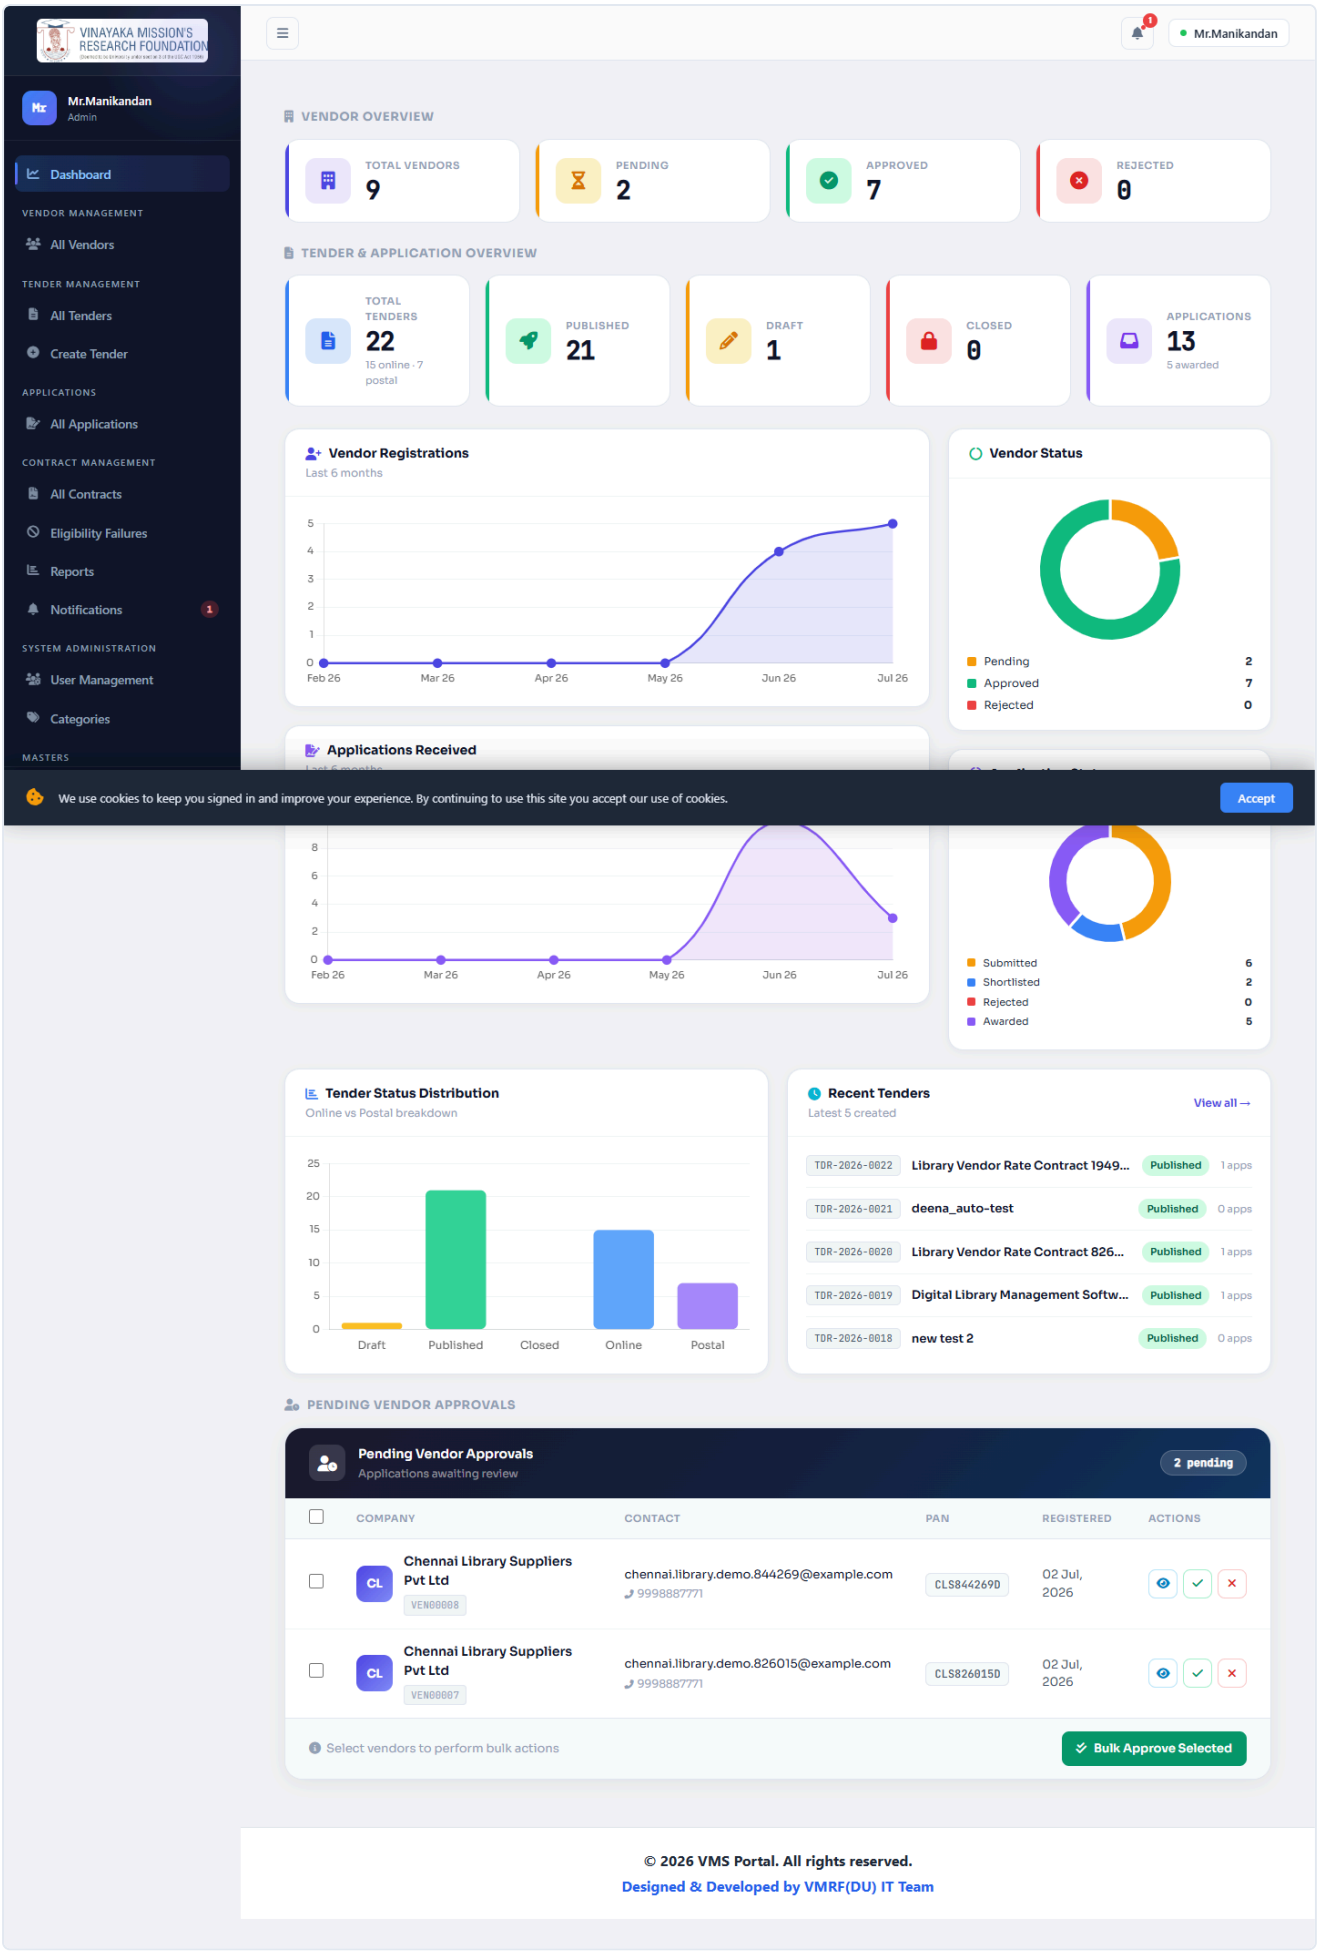

One login form, four different landing dashboards. Verified against `AuthController@login` — including the account-inactive and vendor-pending-approval gates that log a user back out before they ever see a dashboard.

Tender Analytics — views, unique visitors, application funnel for this tender.

Draft Tender Detail

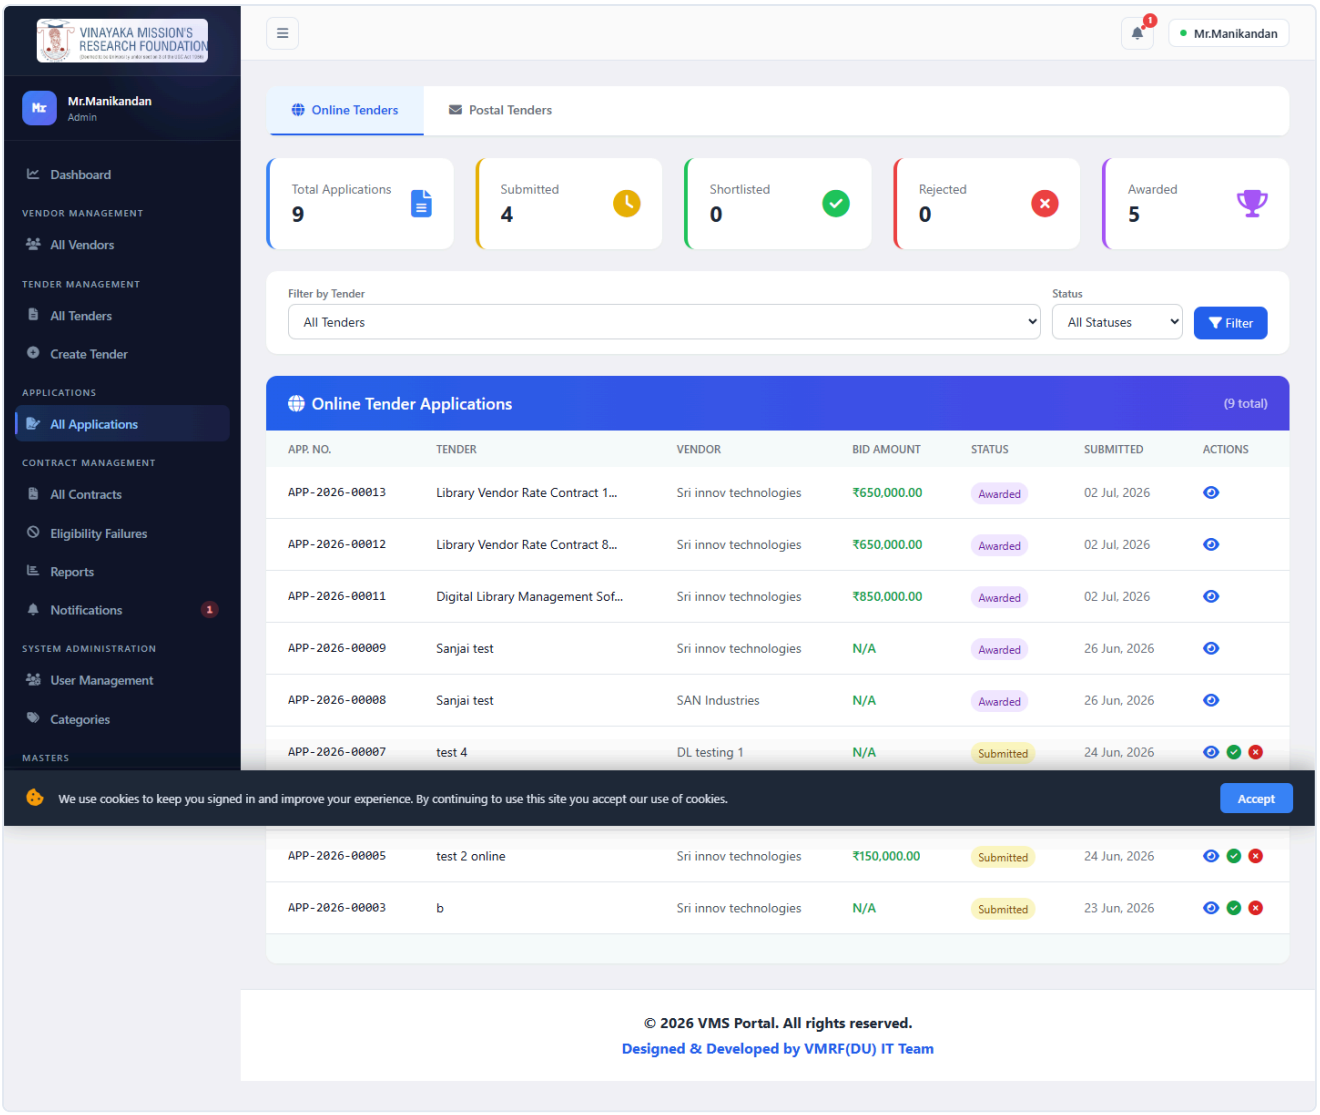

Manage Committee — assign evaluators to this specific tender with scoped permissions.

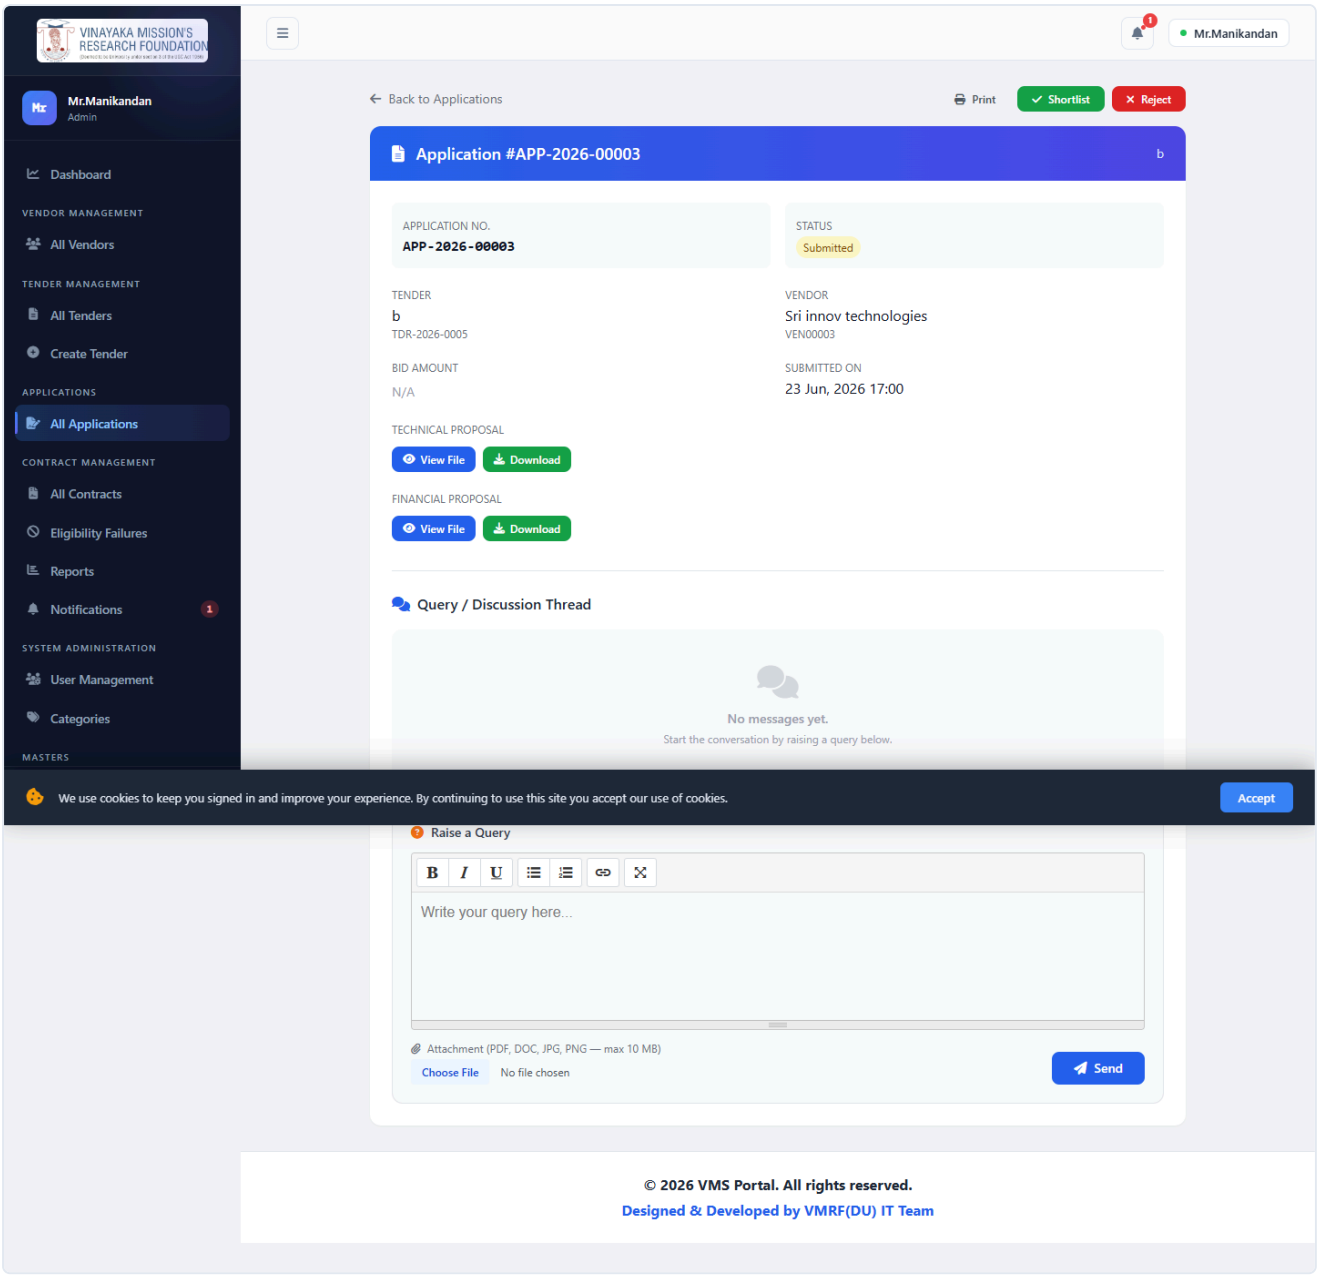

Application Management

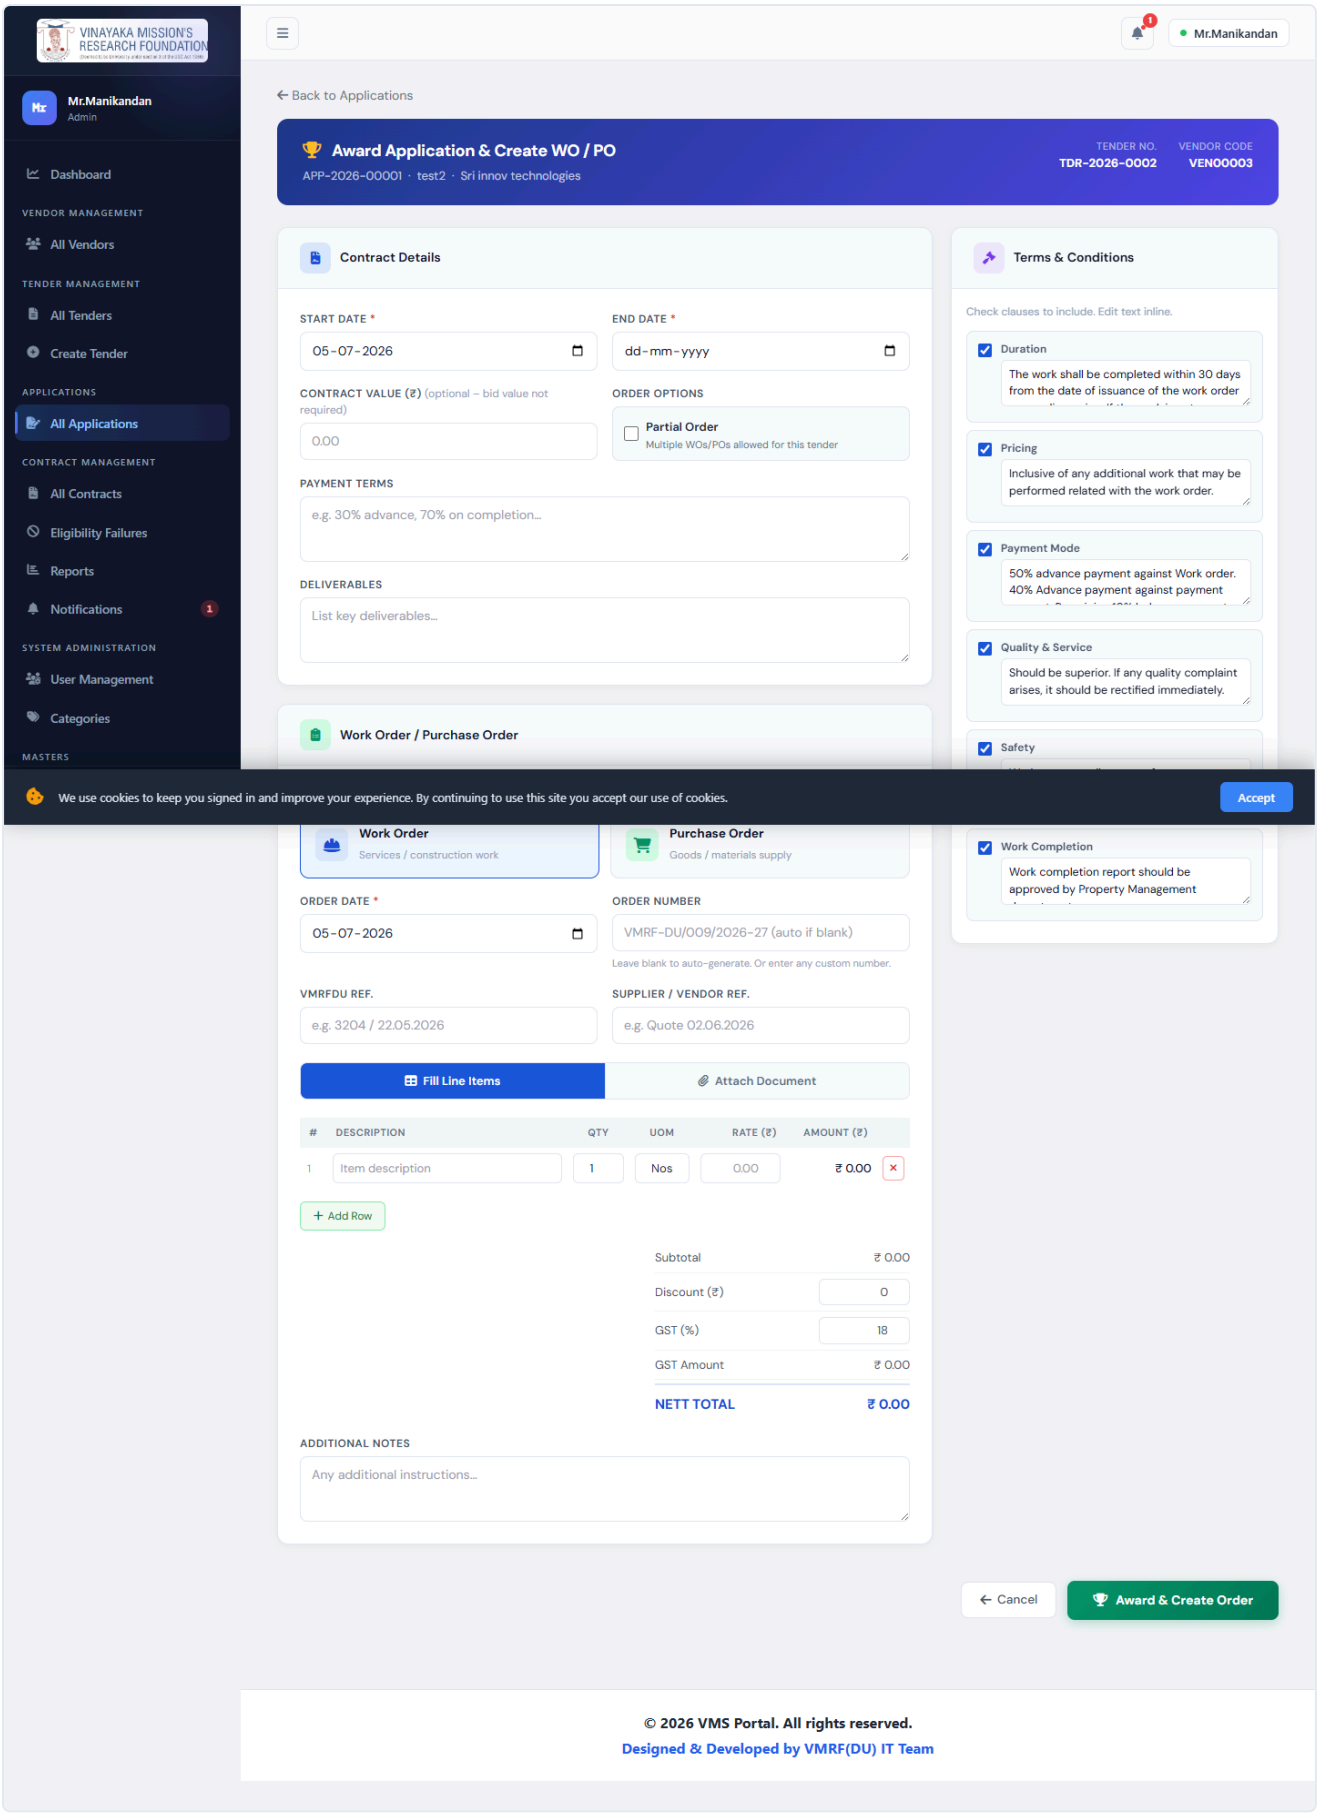

All Applications — every application ever received, across all tenders. This is where "application received" turns into a decision: shortlist it, reject it, or (once shortlisted) award it.

Application Detail — vendor's proposal, status, Shortlist/Reject actions, and the query/discussion thread.

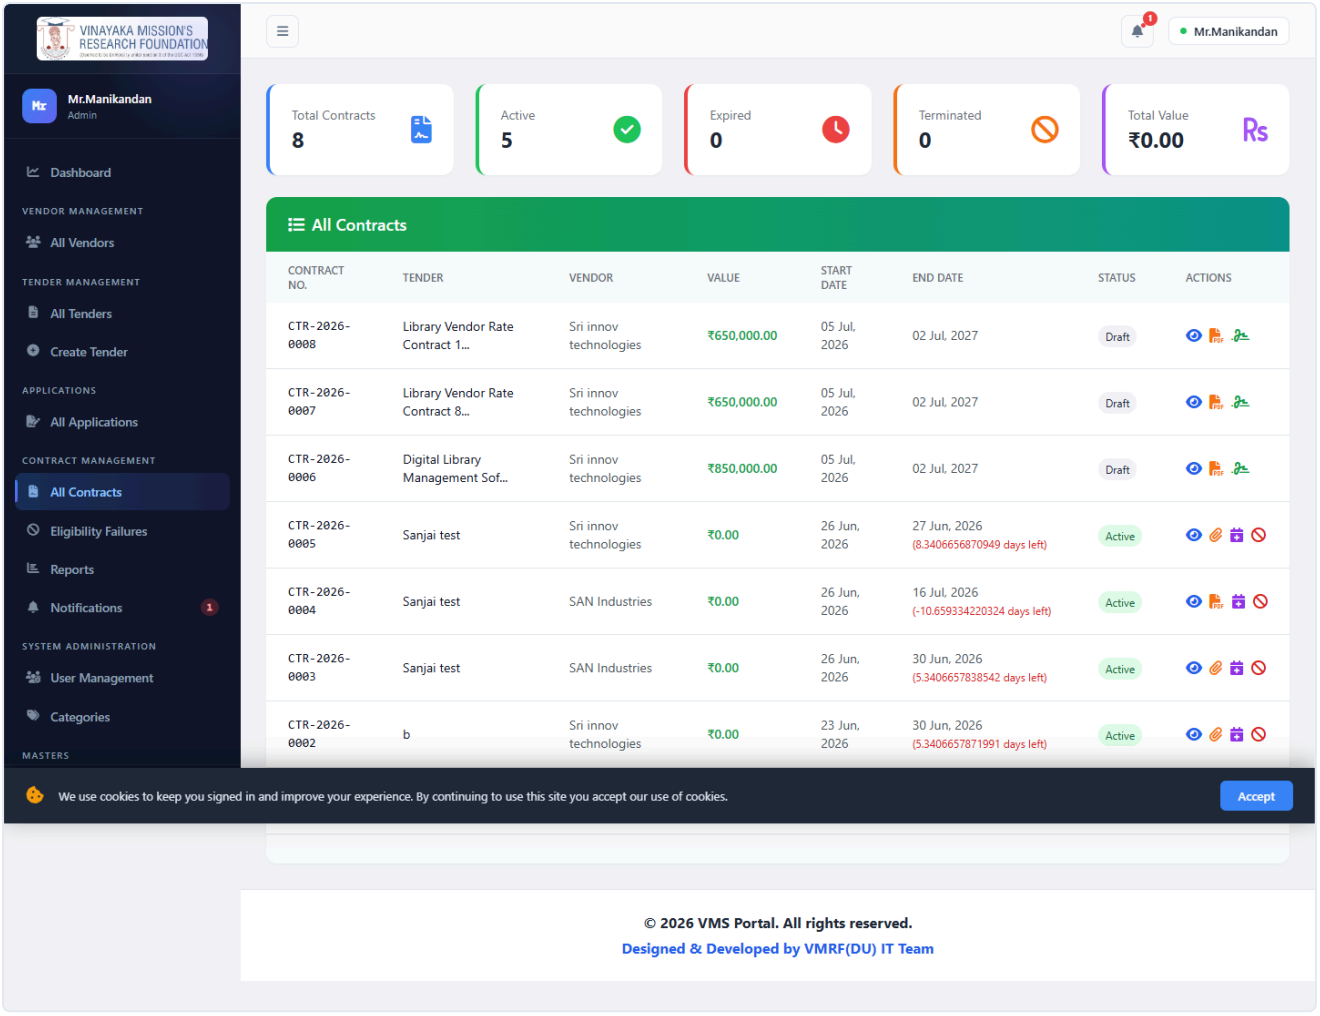

Award Application & Create Work/Purchase Order — turns a shortlisted application into a contract. Signature collection is a per-tender choice the Tender Owner made at creation time, not a fixed requirement — see §8 diagram 5.

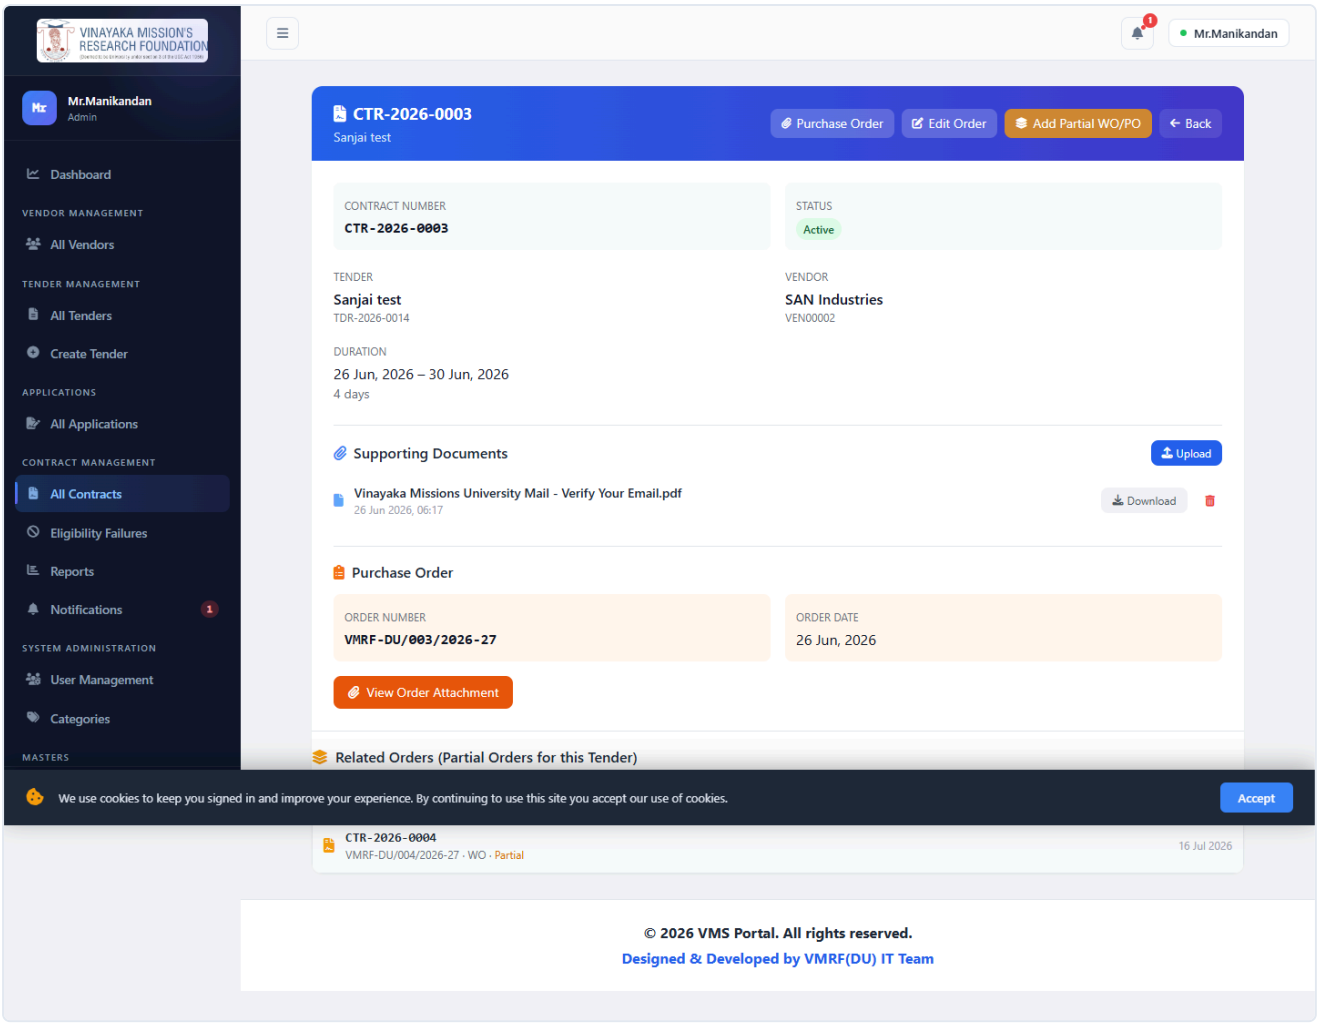

Contract Management

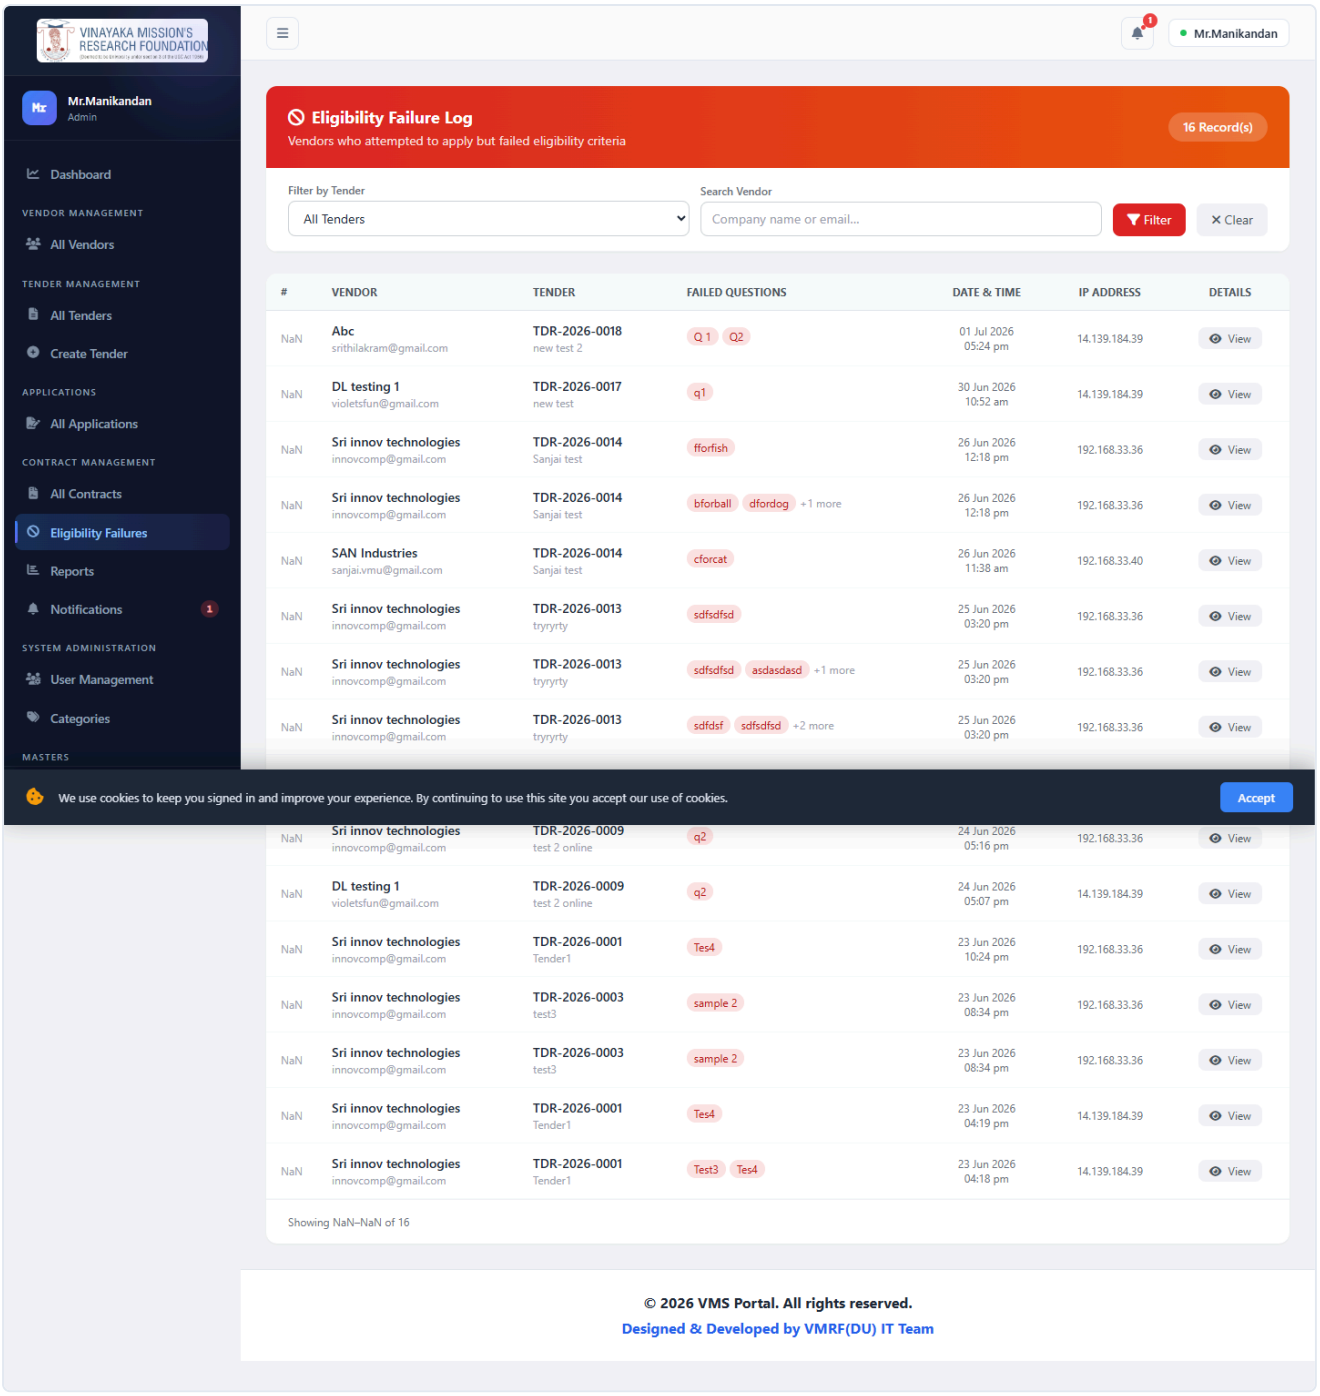

All Contracts

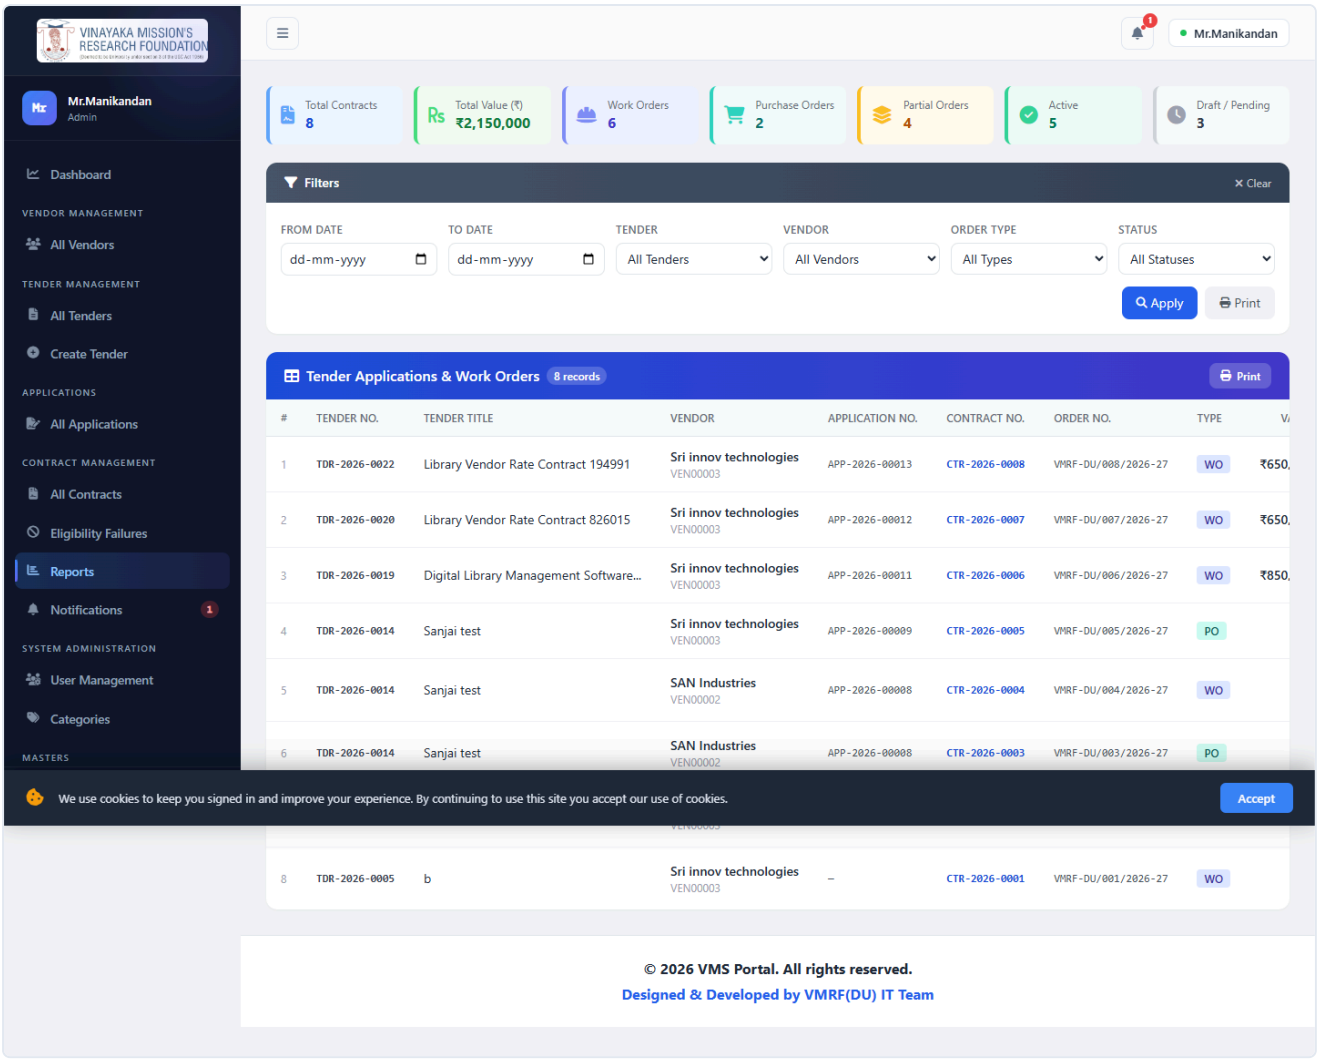

Contract Detail

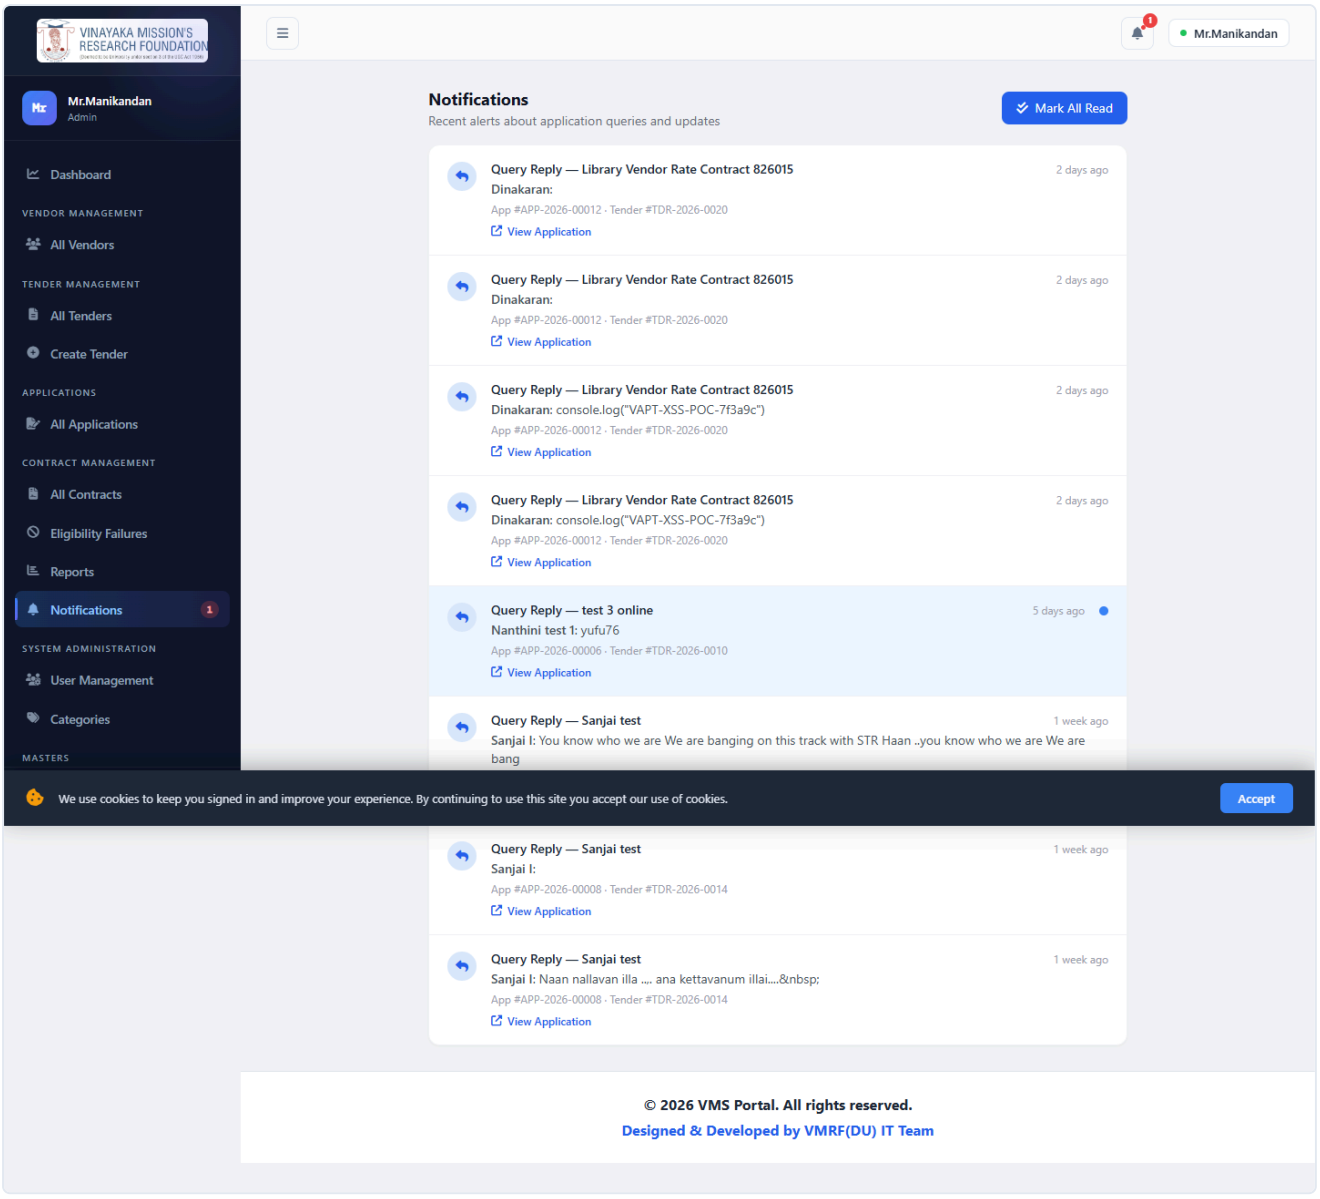

Eligibility Failures — vendors who attempted to apply but failed the eligibility screen.

Manage Committee

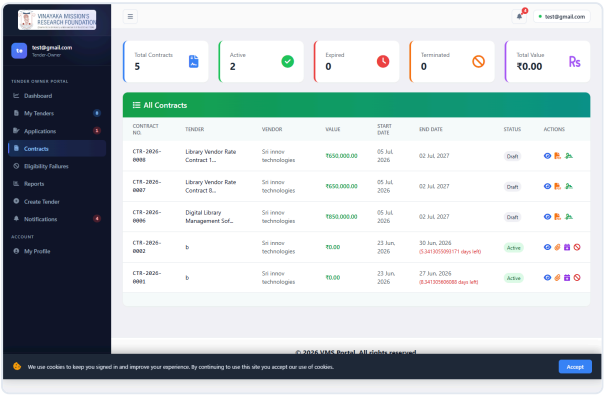

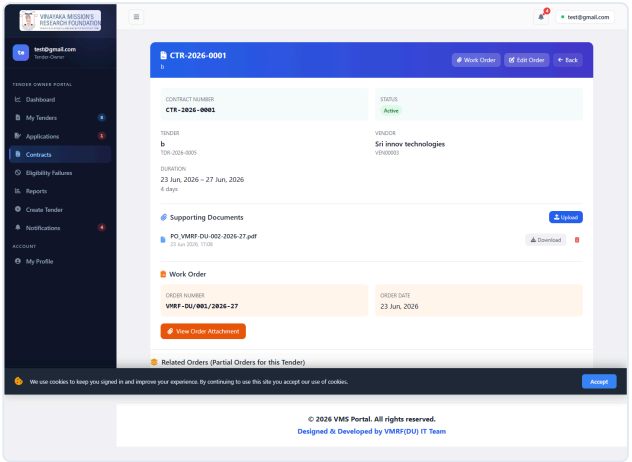

Applications

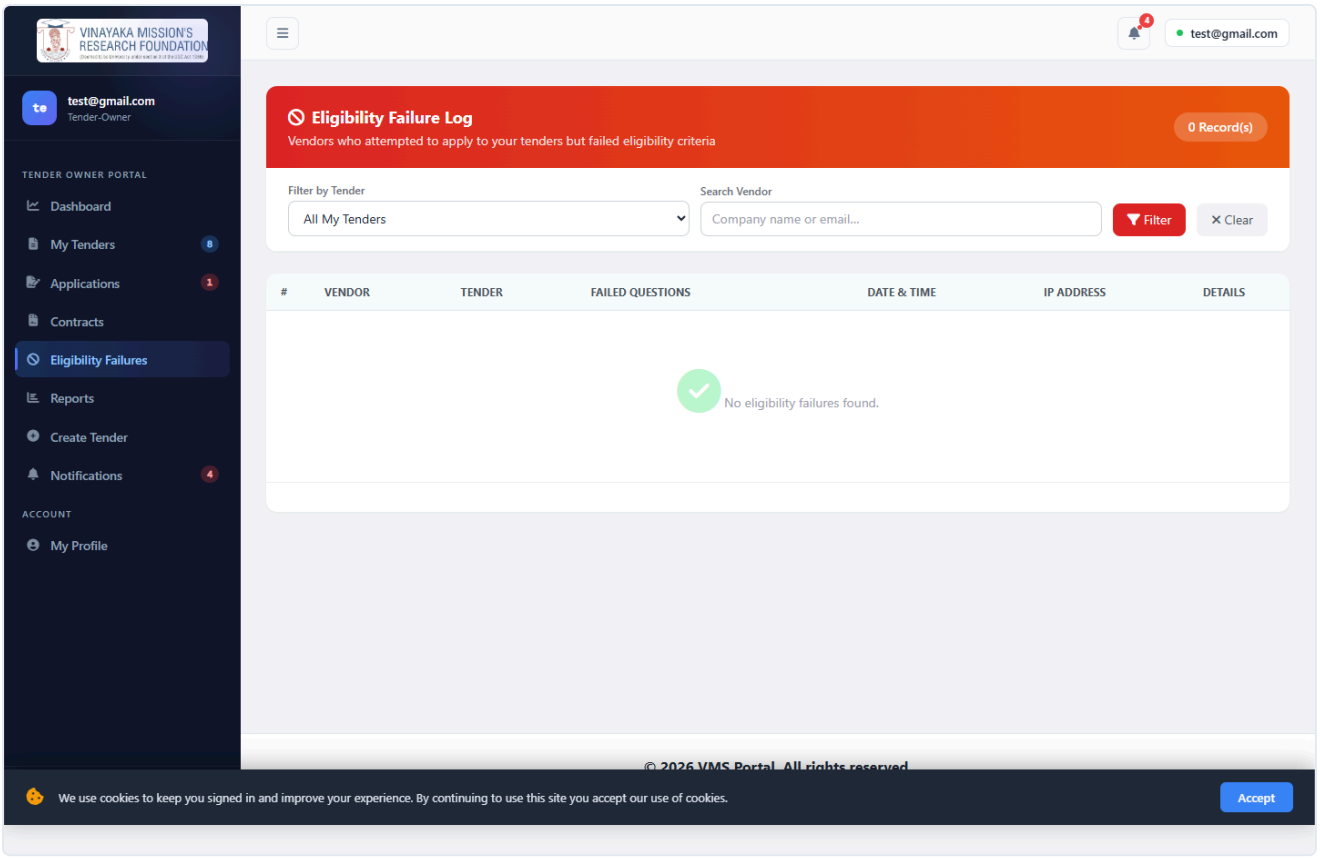

List	Detail
	

An application arriving here is just the start: from **Received** (submitted), the Tender Owner can **Shortlist** it, then **Award** it from the Applications list (trophy icon) — which is what actually generates the contract and Work/Purchase Order. Awarding requires the application to have been shortlisted first; there's no way to award a raw submission directly.

Postal Tenders

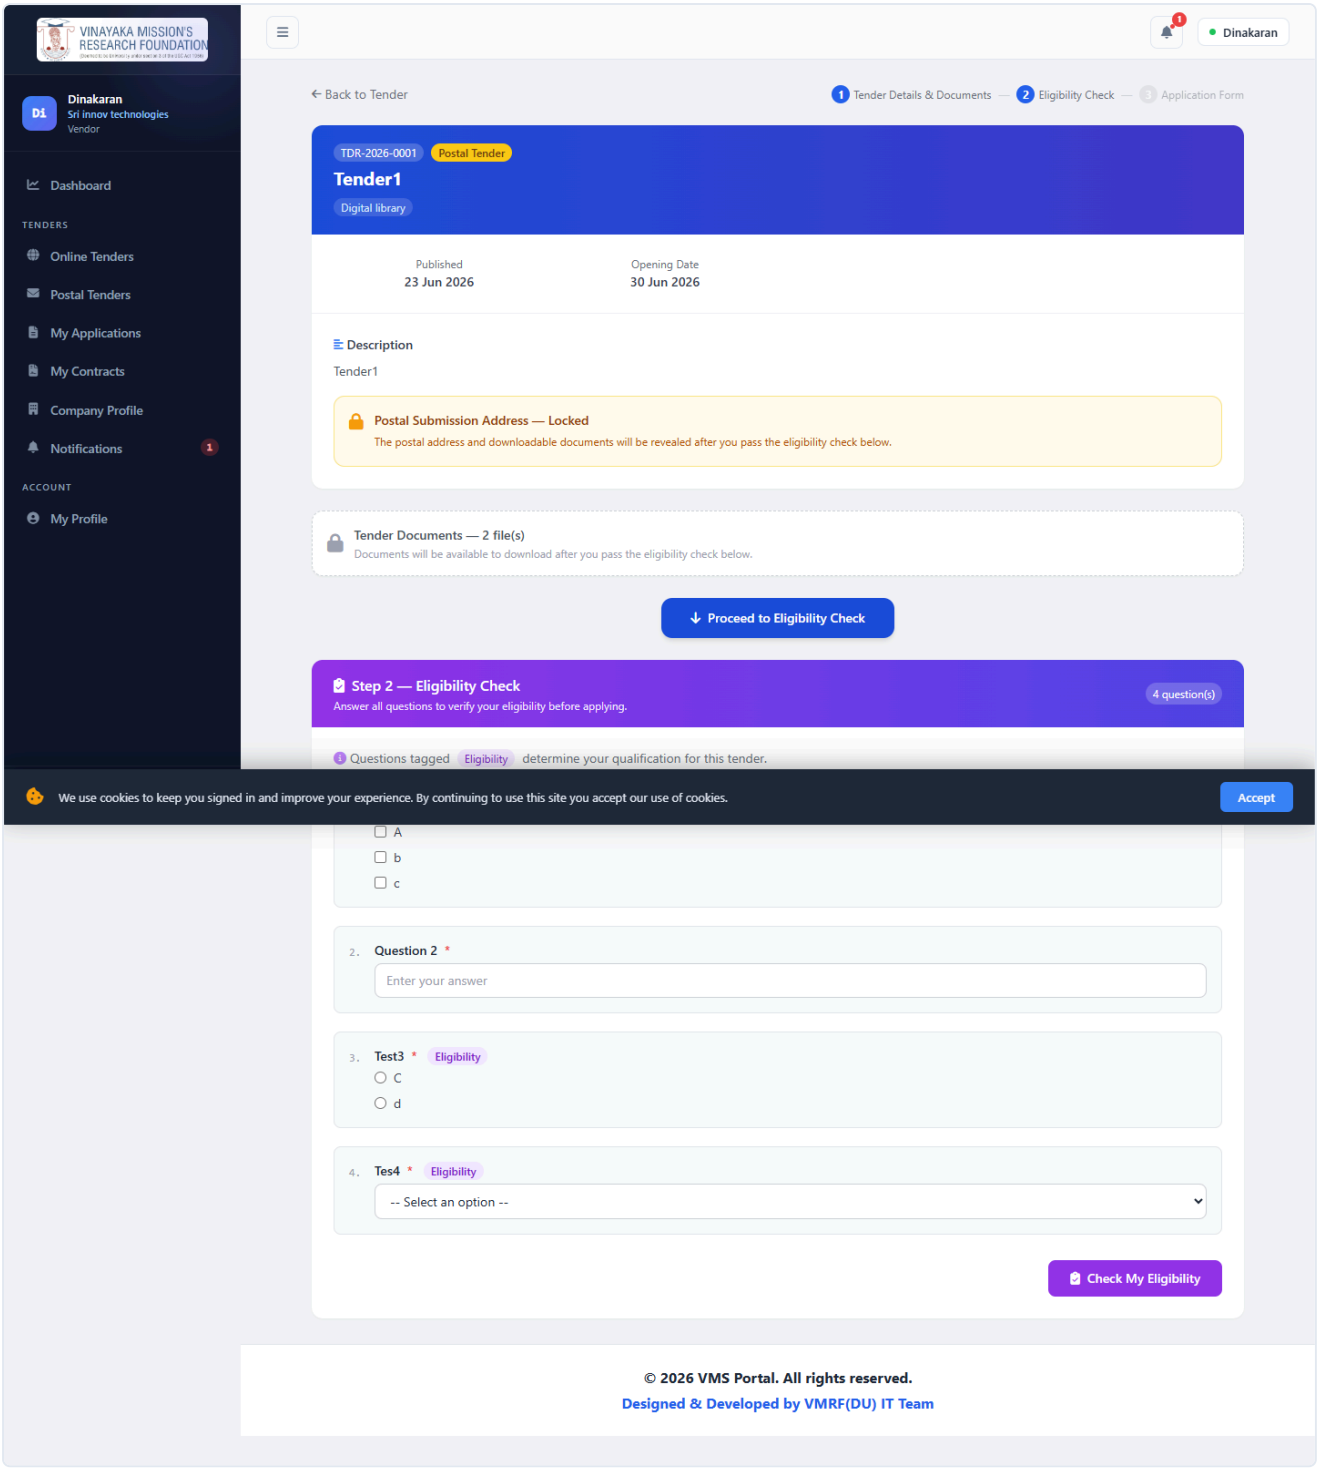

Tender Detail

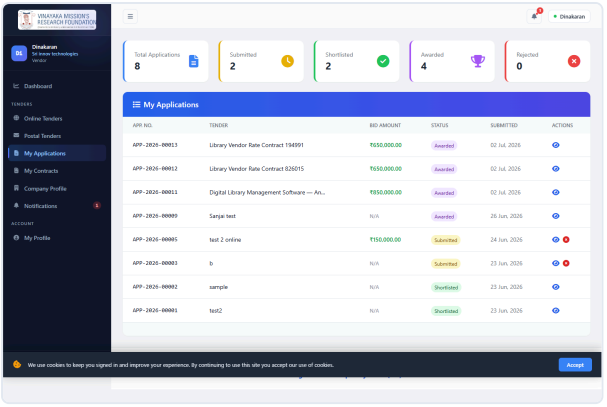

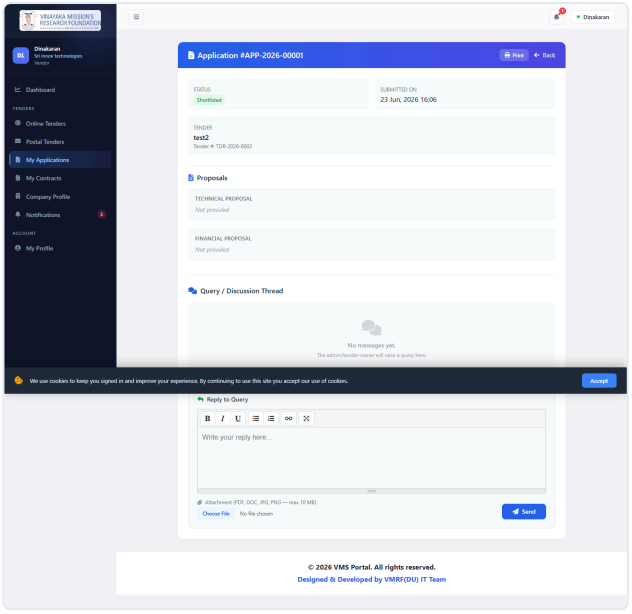

For **postal** tenders, the submission address and downloadable documents stay locked until the vendor passes the eligibility check.

Apply to a Tender (2–3 step wizard)

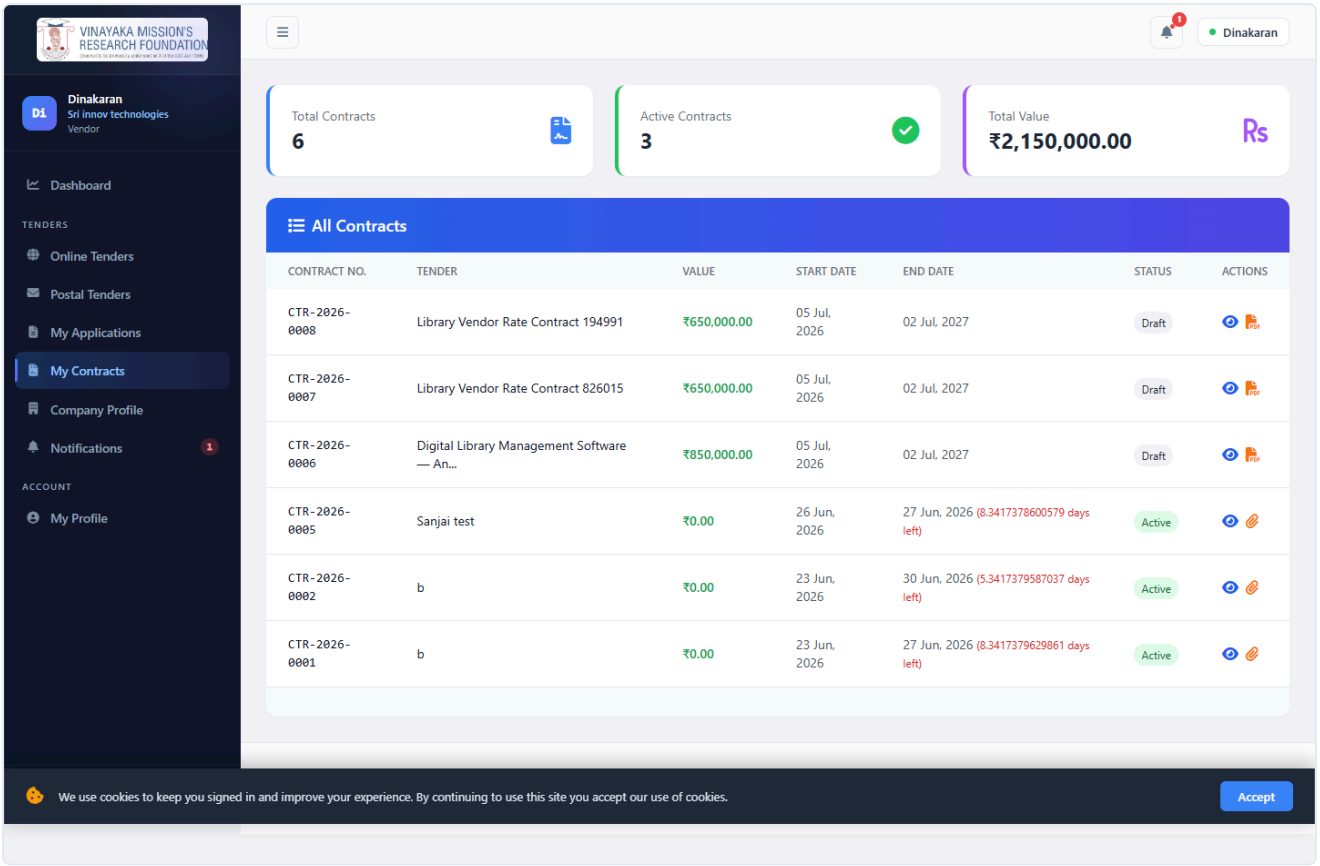

Step 1: tender details/documents. Step 2 (if the tender has eligibility questions): dynamic questionnaire, checked live via AJAX. Step 3: bid/technical/financial proposal, unlocked only after passing. See §13 for this entire flow captured live, step by step.

My Applications

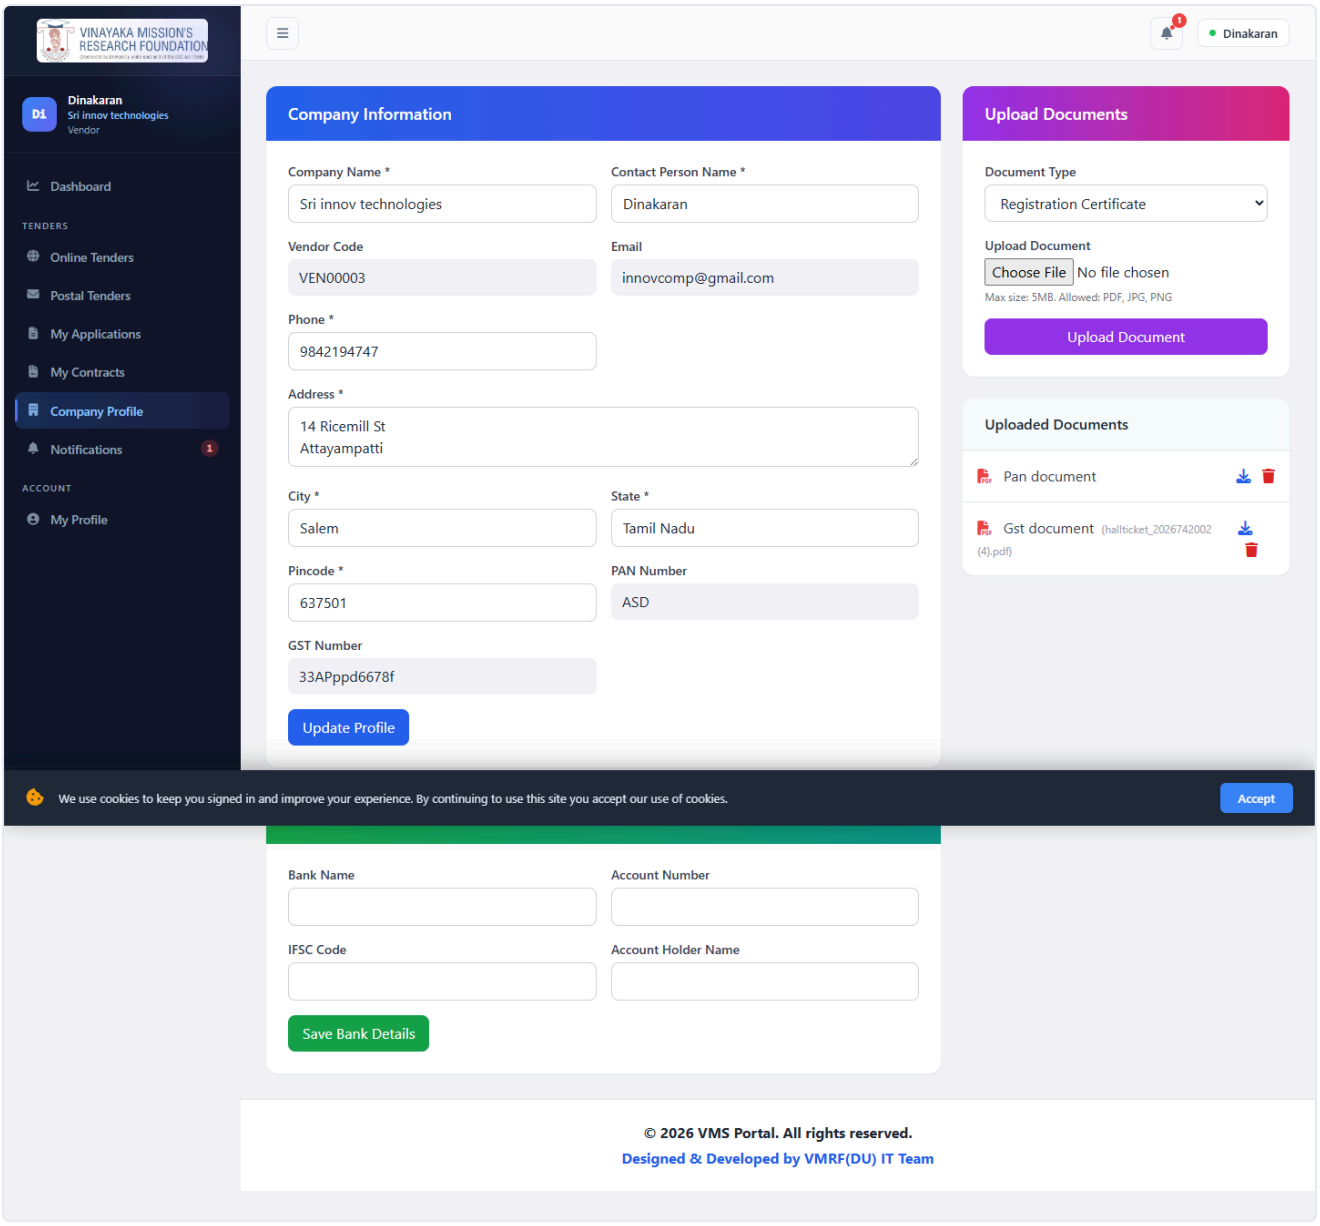

List	Detail
	

My Contracts

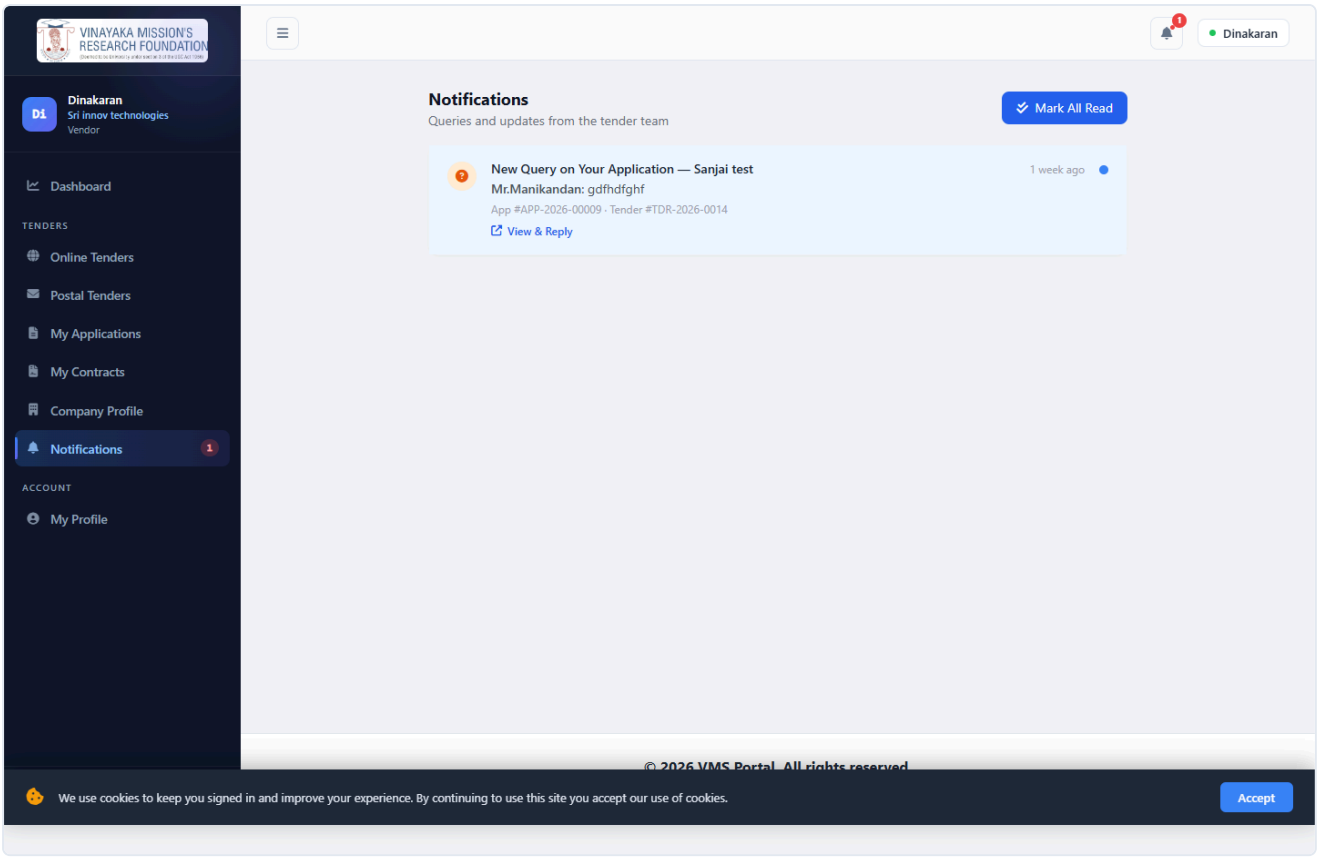

Once awarded, the vendor signs here. Whether a counter-signature from the University is also required depends on how the Tender Owner configured that specific tender (§8 diagram 5) — for a standing rate contract, the Tender Owner may choose to skip formal signing entirely and activate the contract immediately on award.

7. Committee Member Manual

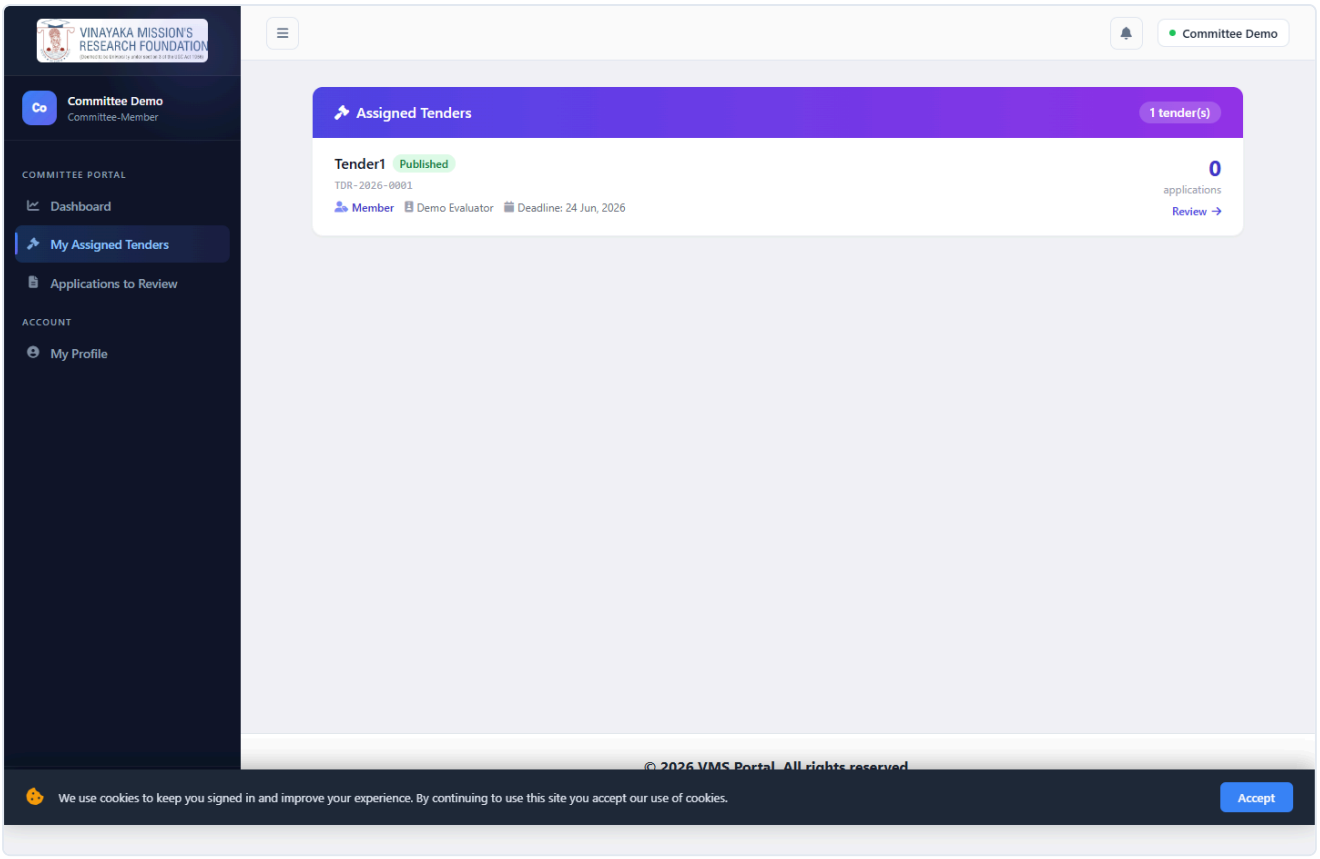

Login: a demo account (`committee.demo@example.com`) for the static screenshots below; §13 shows a *second* committee member created live through the actual "Manage Committee" UI, the way a Tender Owner would really do it.

Committee members are assigned to specific tenders by the Admin/Tender Owner with a scoped JSON permission set. This role gives evaluators visibility without full tender-management rights.

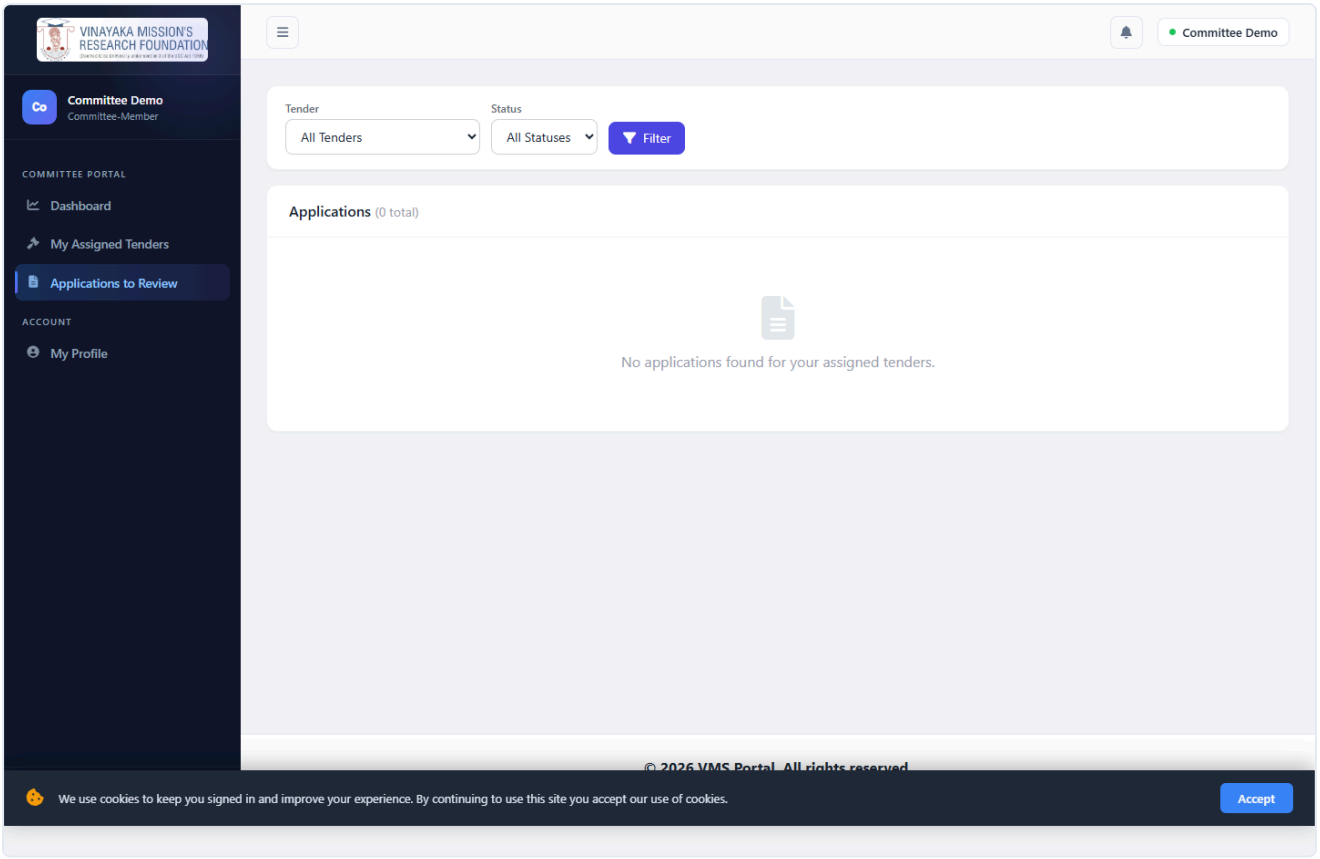

Dashboard

My Assigned Tenders

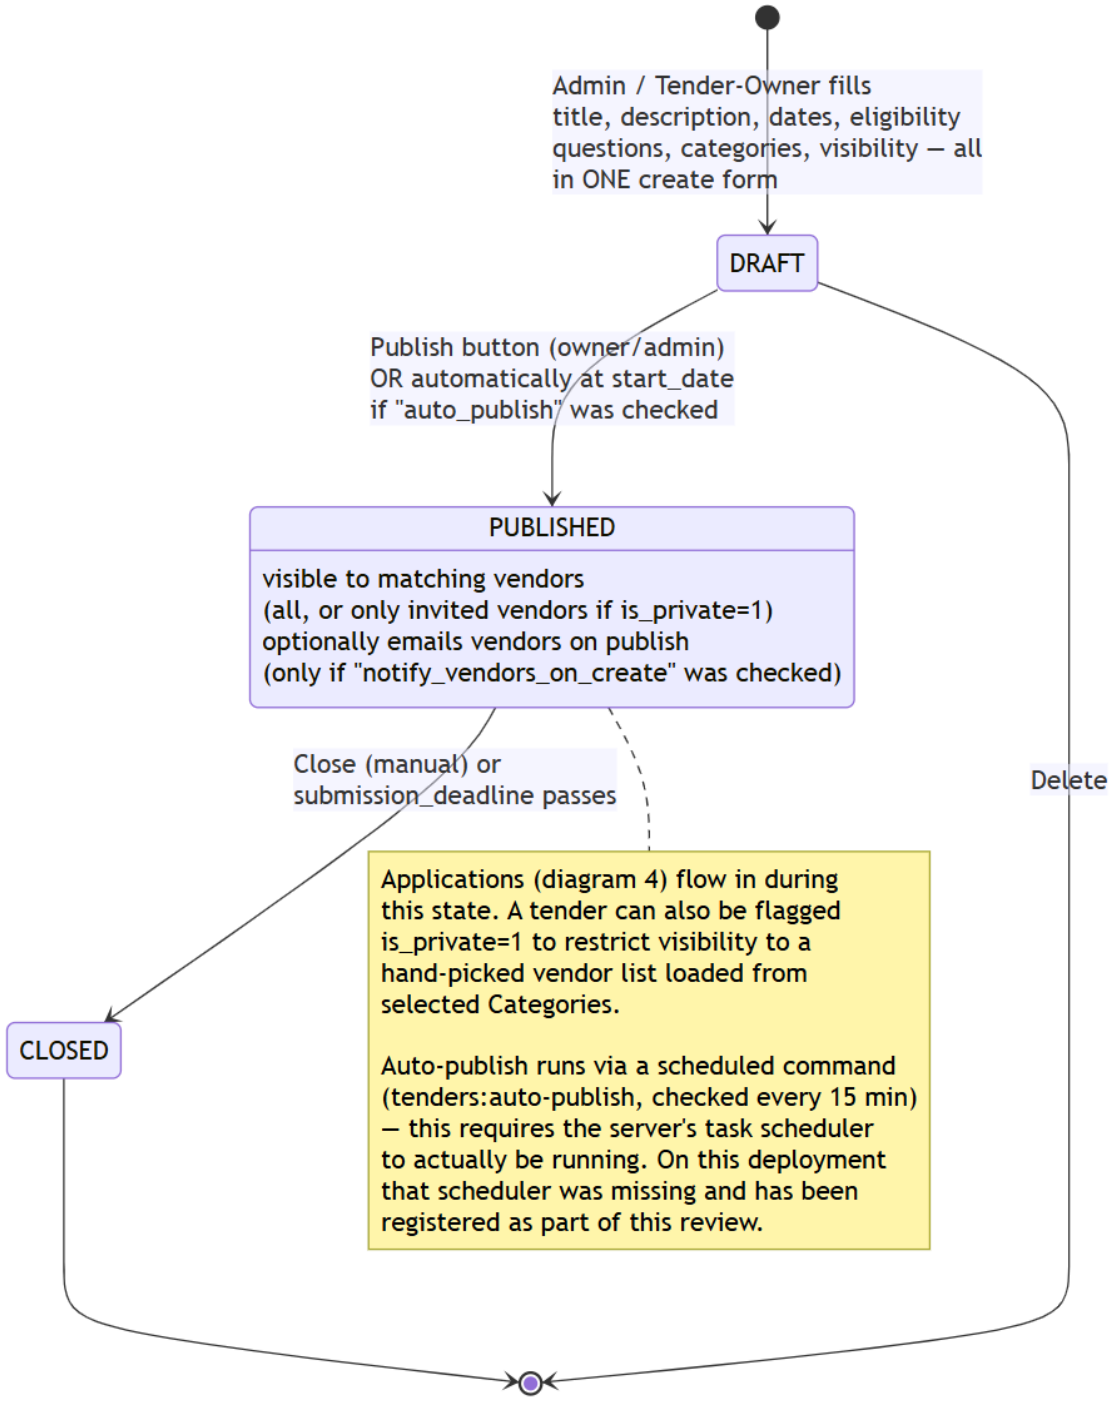

Applications to Review

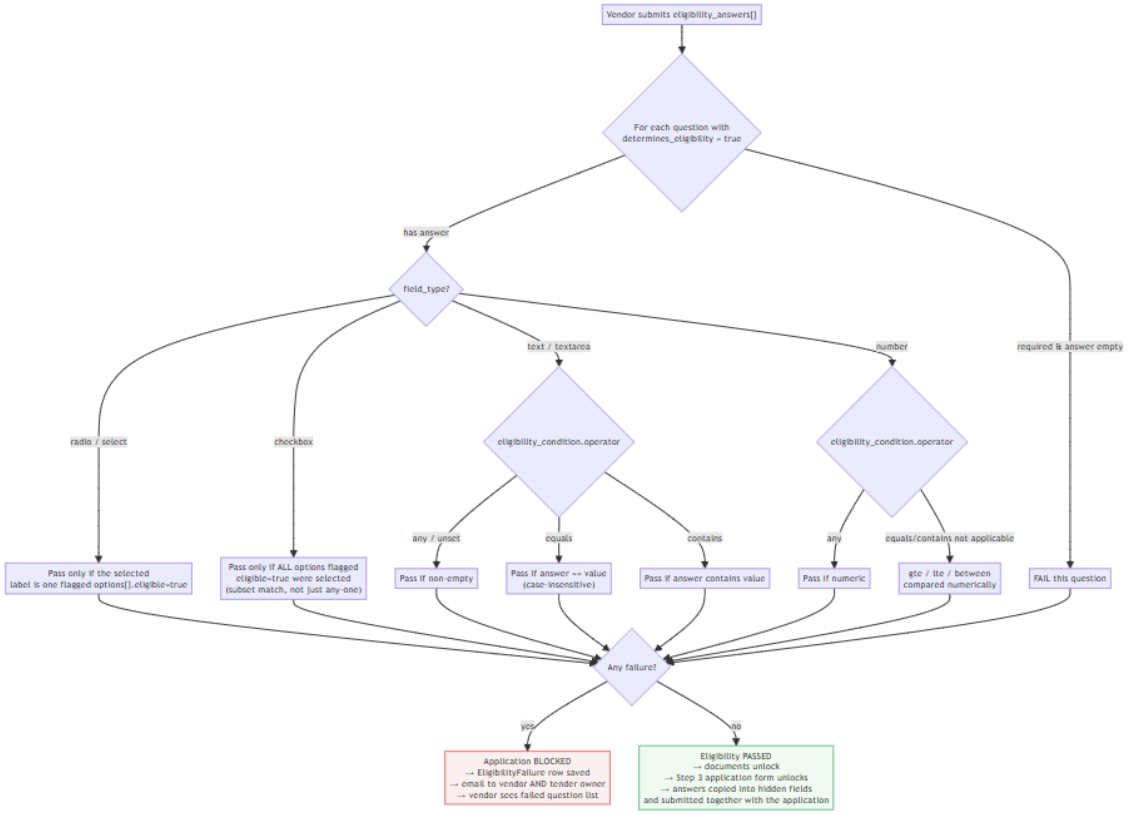

8. Tender → Application → Contract Lifecycle (with flowcharts)

1. **Tender**: `draft → published → closed` (created with eligibility questions in one form; publishes manually or automatically at `start_date` if auto-publish was checked — this scheduled job now runs correctly, see §12)
2. **Application received**: vendor passes an **eligibility check** (or is blocked, logged as an `EligibilityFailure`) → status becomes `submitted` ("received")
3. **Shortlist → Award**: the Tender Owner or Admin reviews the received application, **shortlists** it, then **awards** it — awarding is what generates the contract
4. **Contract signing is optional, by design**: whether the vendor (and University) must formally sign before the contract activates is a checkbox the Tender Owner sets per tender — see diagram 5 below for both paths and a gap found while testing the "signing required" path

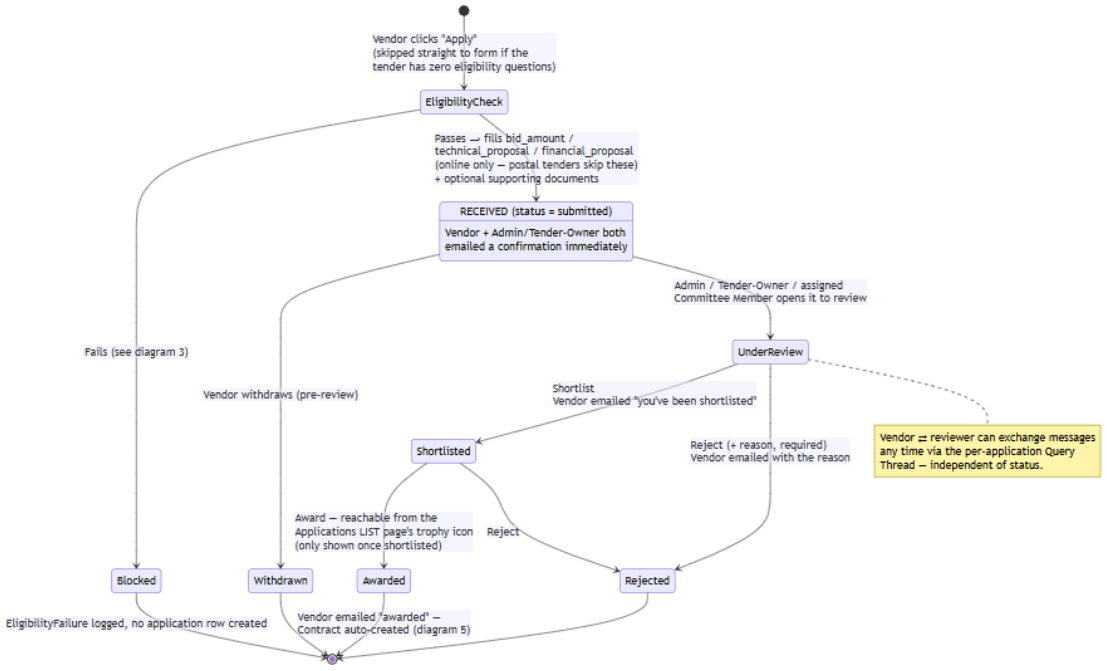

Tender Lifecycle (State Machine)

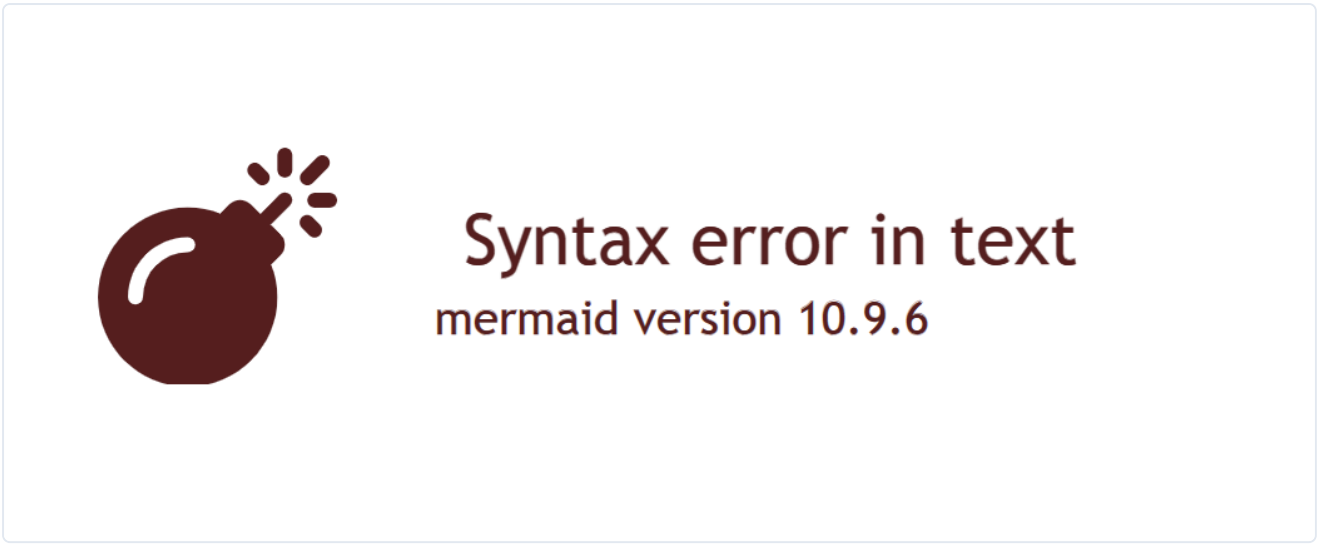

Vendor Eligibility Check — Decision Logic

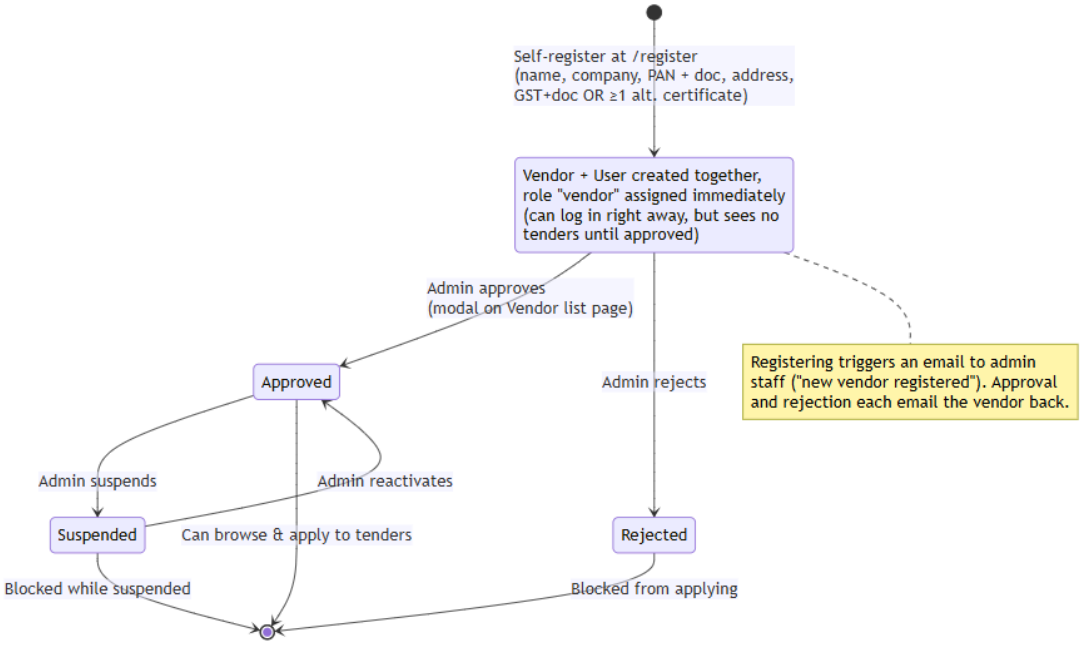

Vendor Application Lifecycle — Received → Shortlisted → Awarded

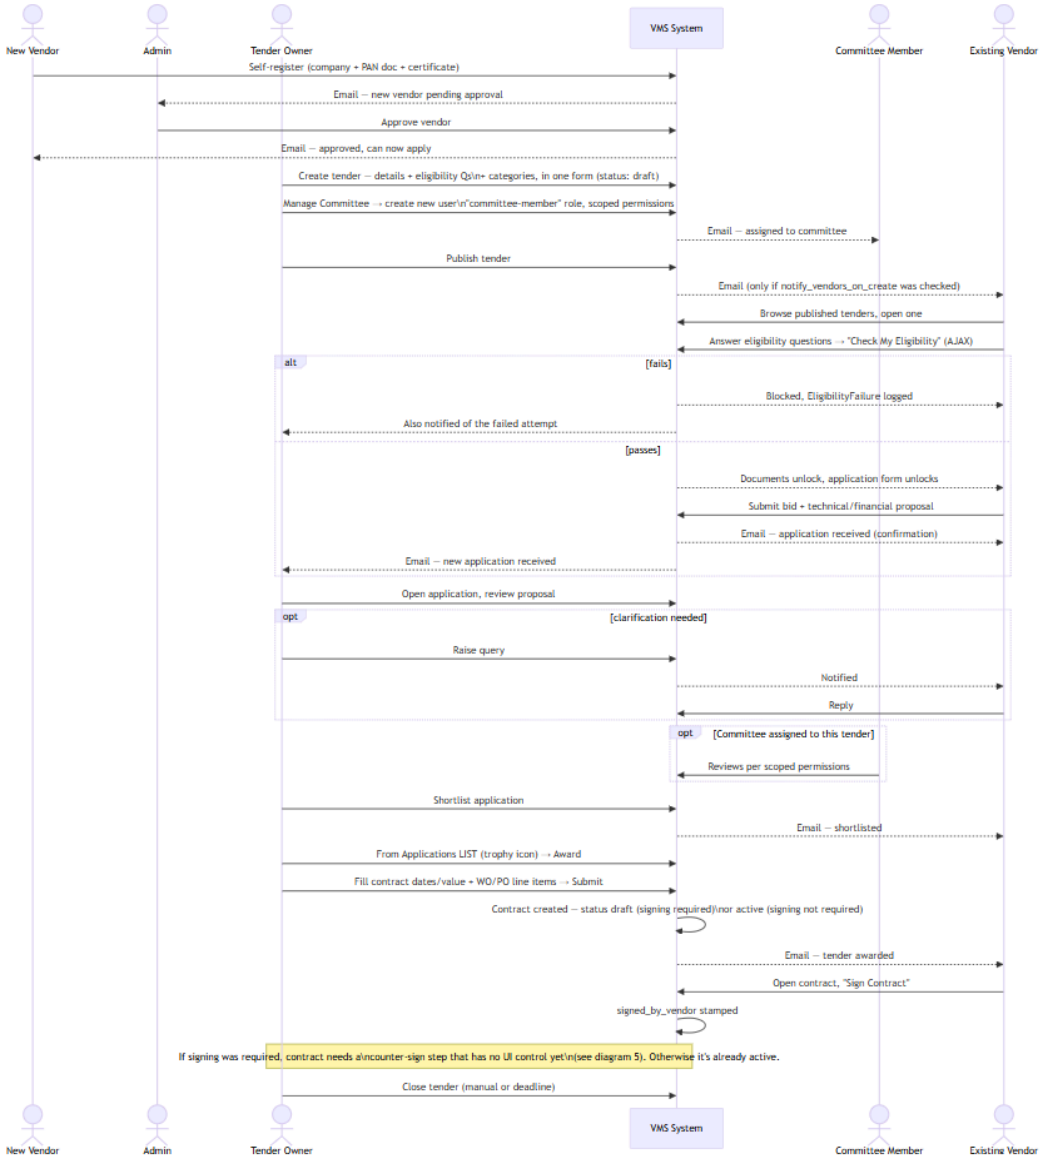

Contract & Work/Purchase Order — Signing Is Optional, By Design

Vendor Registration & Approval

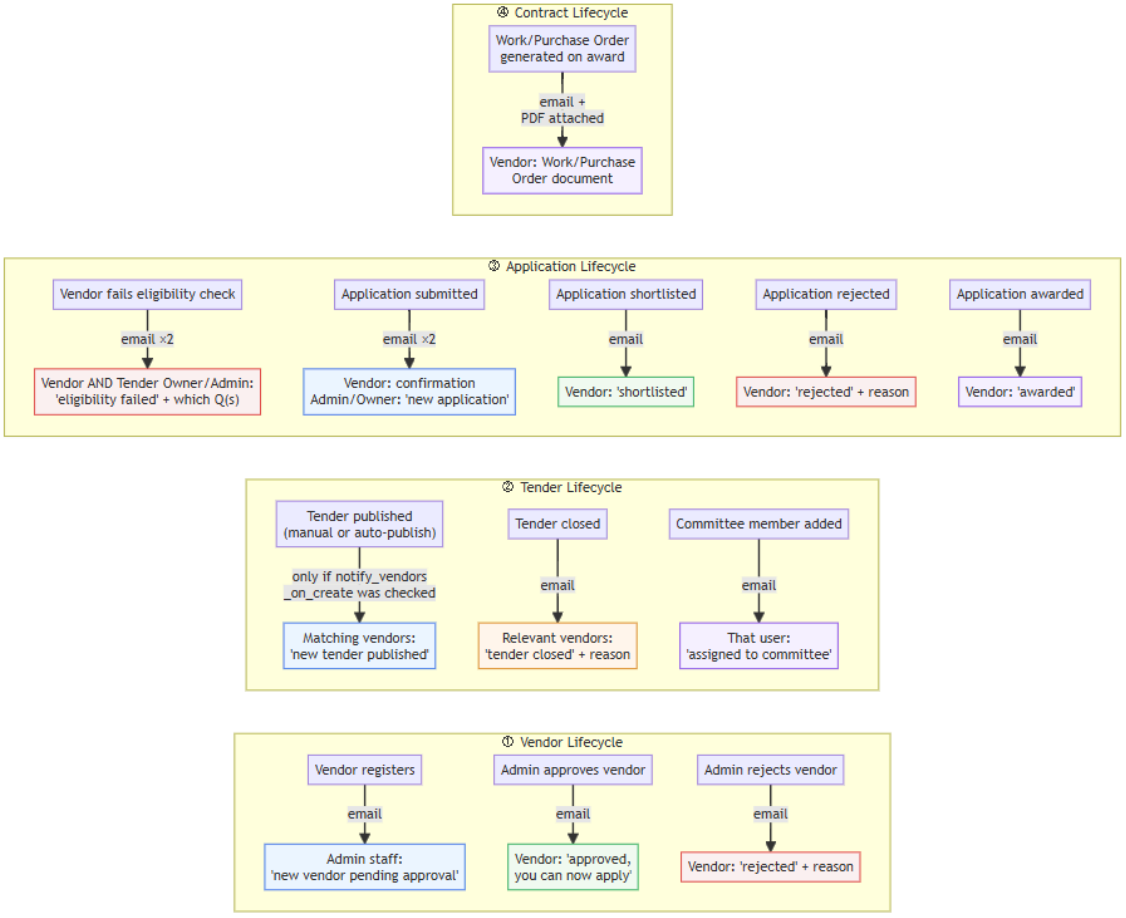

End-to-End Procurement Flow (Sequence Diagram) — as live-verified

9. Automatic Email Notifications

Every step of the process notifies the right person automatically — nobody has to remember to tell a vendor their application was received, shortlisted, or awarded. This was verified by reading every `Mail::to(...)->send(...)` call in the codebase, not assumed.

In plain terms:

Trigger	Who gets emailed
Vendor registers	Admin staff — new vendor pending approval
Vendor approved / rejected	The vendor, either way
Tender published	Matching vendors — **only if** the Tender Owner checked "notify vendors on publish"
Tender closed	Relevant vendors, with the reason
Committee member added	That person, with their role/designation

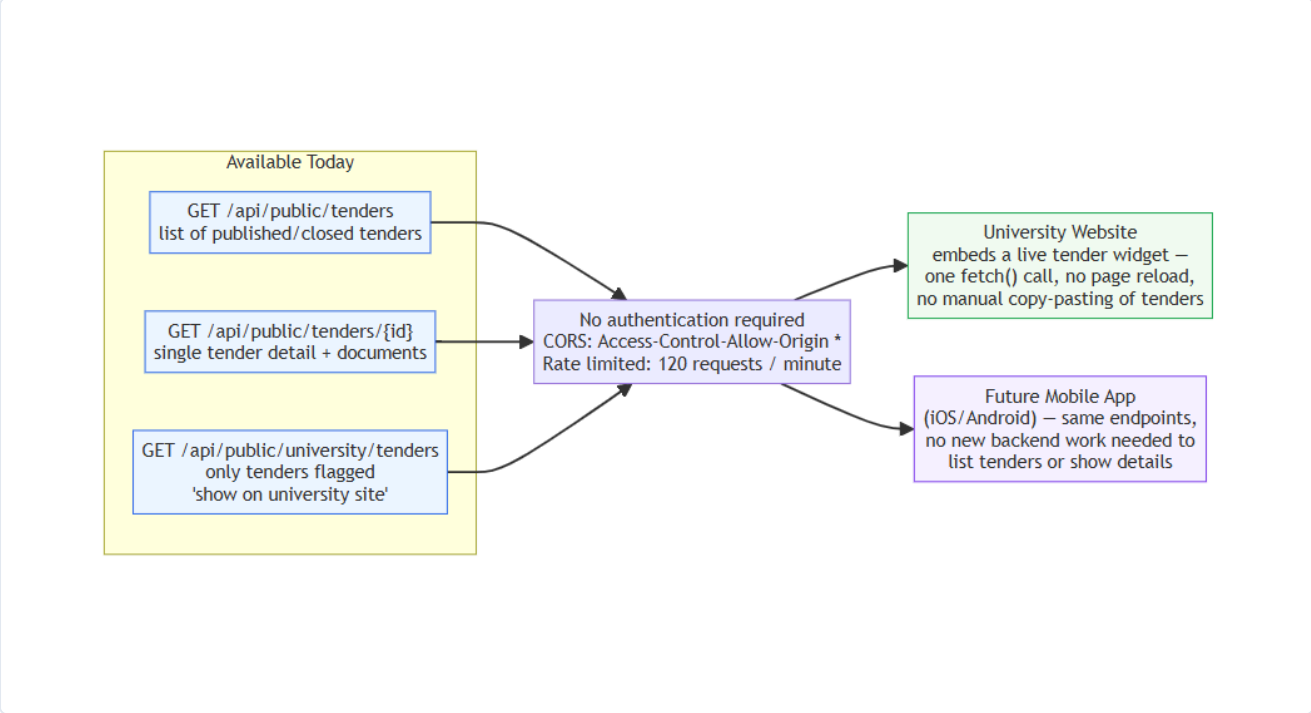

Trigger	Who gets emailed
Vendor fails eligibility check	Both the vendor **and** the Tender Owner/Admin, naming which question(s) failed
Application submitted	Vendor gets a confirmation; Tender Owner/Admin gets a "new application" alert
Application shortlisted	The vendor
Application rejected	The vendor, with the reason
Application awarded	The vendor
Work/Purchase Order generated	The vendor, with the order document attached as a PDF

Every one of these is wrapped in its own try/catch — a failed email (e.g. a temporary SMTP hiccup) never blocks the underlying action. Approvals, publishes, shortlists, and awards all still go through even if a notification fails to send; the failure is only logged.

---

10. Future-Ready: Mobile App & Public Website Integration

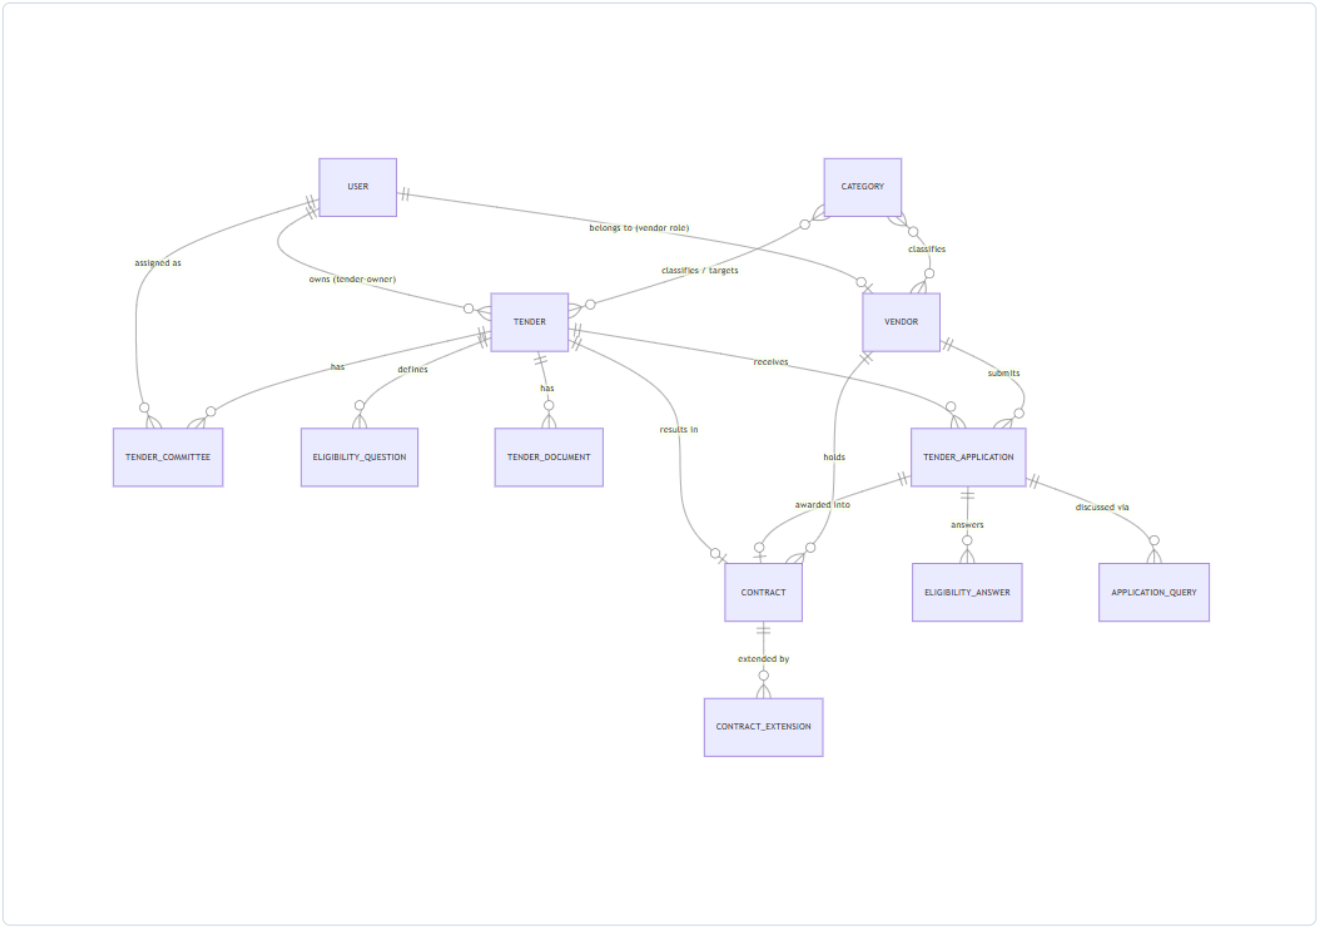

The portal was built with more than the internal dashboards in mind. It already exposes a public, unauthenticated, CORS-enabled JSON API — the same foundation a mobile app and a live tender feed on the main university website would both need, with no additional backend work required to switch either one on.

- **University website integration**: the main site can embed a live "Current Tenders" widget with a single `fetch()` call to `GET /api/public/university/tenders` — no manual copying of tender details onto the website, no second place for information to go stale. Only tenders the Tender Owner explicitly flags "show on university site" appear here.
- **Mobile app readiness**: `GET /api/public/tenders` and `GET /api/public/tenders/{id}` already return everything a mobile listing/detail screen would need (title, dates, value, documents), rate-limited to 120 requests/minute per visitor and open to any origin. A future iOS/Android app — or a vendor-facing "apply from your phone" experience — can be built against these same endpoints without touching the server.

12. Known Issues Found During This Review

Several real, verified bugs were found and fixed live during this review — not just documented. Two remain open.

🟢 Fixed — Auto-publish silently did nothing

Tenders with "auto-publish on start date" checked stayed stuck in Draft indefinitely. The `tenders:auto-publish` command itself was correct — running it manually published tenders instantly — but **nothing on the server was ever calling Laravel's scheduler**. On Windows/XAMPP there is no cron; Laravel's `Schedule::command(...)->everyFifteenMinutes()` only defines *what* to run, and something external has to trigger `php artisan schedule:run` every minute for anything to actually fire. That trigger never existed here. **Fixed** by registering a Windows Scheduled Task ("VMS Laravel Scheduler") that runs `php artisan schedule:run` every minute — verified live (`LastTaskResult: 0` , tender auto-published on the next tick).

🟢 Fixed — Vendor approve/reject/suspend/activate/view were all silently broken

This is more serious than a single screen. The vendor list's approve, reject, suspend, activate, view-details, categories, and delete actions all derived their API path from `window.location.pathname.split('/')[1]` . Because this app is deployed under a `/vms-system/` subpath (not domain root), that always evaluated to `"vms-system"` instead of `"admin"` , so **every one of those six actions silently 404'd** — clicking "Approve" showed a success-looking modal, but the vendor's status never actually changed in the database. Confirmed live: a vendor approved during an earlier documentation pass was still "Pending" days later. **Fixed** by deriving the role prefix from the authenticated user's actual role server-side instead of parsing the URL, across all six occurrences in `admin/vendors/index.blade.php` . Re-verified live — approvals now persist correctly.

🟢 Fixed — Tender Owners shortlisting/rejecting sent no email to the vendor

The Admin-side shortlist/reject endpoints emailed the vendor; the Tender-Owner-side ones (used by the actual "Manage My Tenders" workflow) did not — a vendor applying to a Tender-Owner-run tender got silence instead of a decision email. **Fixed** by adding the same `ApplicationShortlistedMail` / `ApplicationRejectedByAdminMail` notifications to the Tender Owner's controller, matching the Admin path exactly.

🔴 Open — Unauthenticated "force login" route

`routes/web.php:433` — `GET /force-login/{email}` logs in as **any user, by email alone, no password check**. Combined with an `.env` `APP_URL` pointing at a real LAN address rather than localhost, anyone on the network who knows or guesses a user's email gets instant, full-privilege access. **Recommend removing it entirely, or gating it behind `if (app()->environment('local'))`, before this instance is reachable from anywhere but a developer's own machine.**

🟠 Open — No UI path to counter-sign a contract once signing is required

Confirmed by live-testing the full award → sign flow (§13): when a tender has "Require Contract Signing" checked, awarding creates a contract in `draft` status. The vendor can sign it, but **no button anywhere in the Admin or Tender-Owner contract view calls the counter-sign endpoint** — the route exists, it's just never wired to a control. The contract is stuck at `draft` through the UI unless "Require Contract Signing" was left unchecked at tender creation (which auto-activates on award instead). **Fix:** add a "Countersign Contract" button to the contract detail view, shown when `signed_by_vendor && !signed_by_admin`.

---

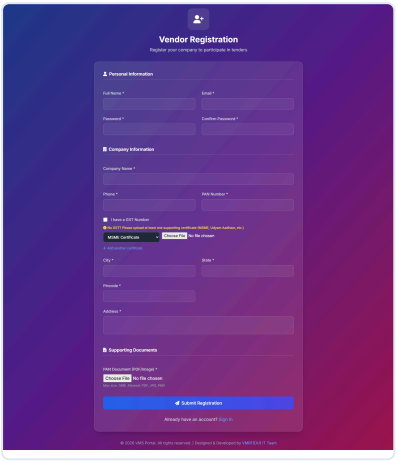

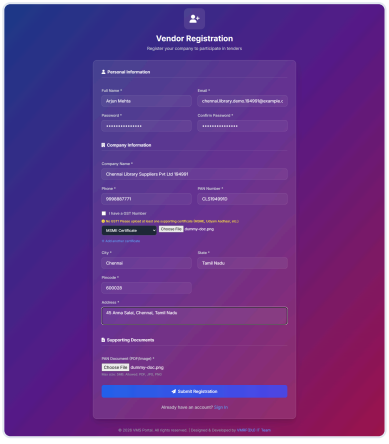

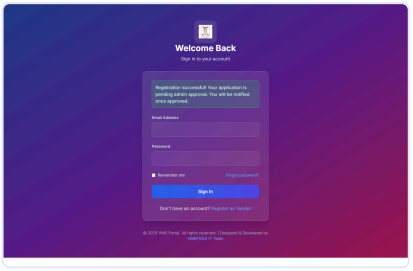

13. Live End-to-End Walkthrough

Everything above shows what each screen looks like. This section shows the system **actually being used** — every screenshot below is a real HTTP request/response against the live app, driven by a script that filled in real forms and clicked real buttons (not just page visits), captured 2026-07-03. Where the app sends real email notifications (Gmail SMTP is configured), those fired for real during this run.

The story: a new vendor registers and gets properly approved (using the now-fixed approval flow) → a Tender Owner creates and publishes a Library Vendor Rate Contract tender, adding a real committee member along the way → an existing vendor discovers it, passes eligibility, and applies → the Tender Owner reviews, shortlists, and awards it, generating a Work Order → the vendor signs the resulting contract.

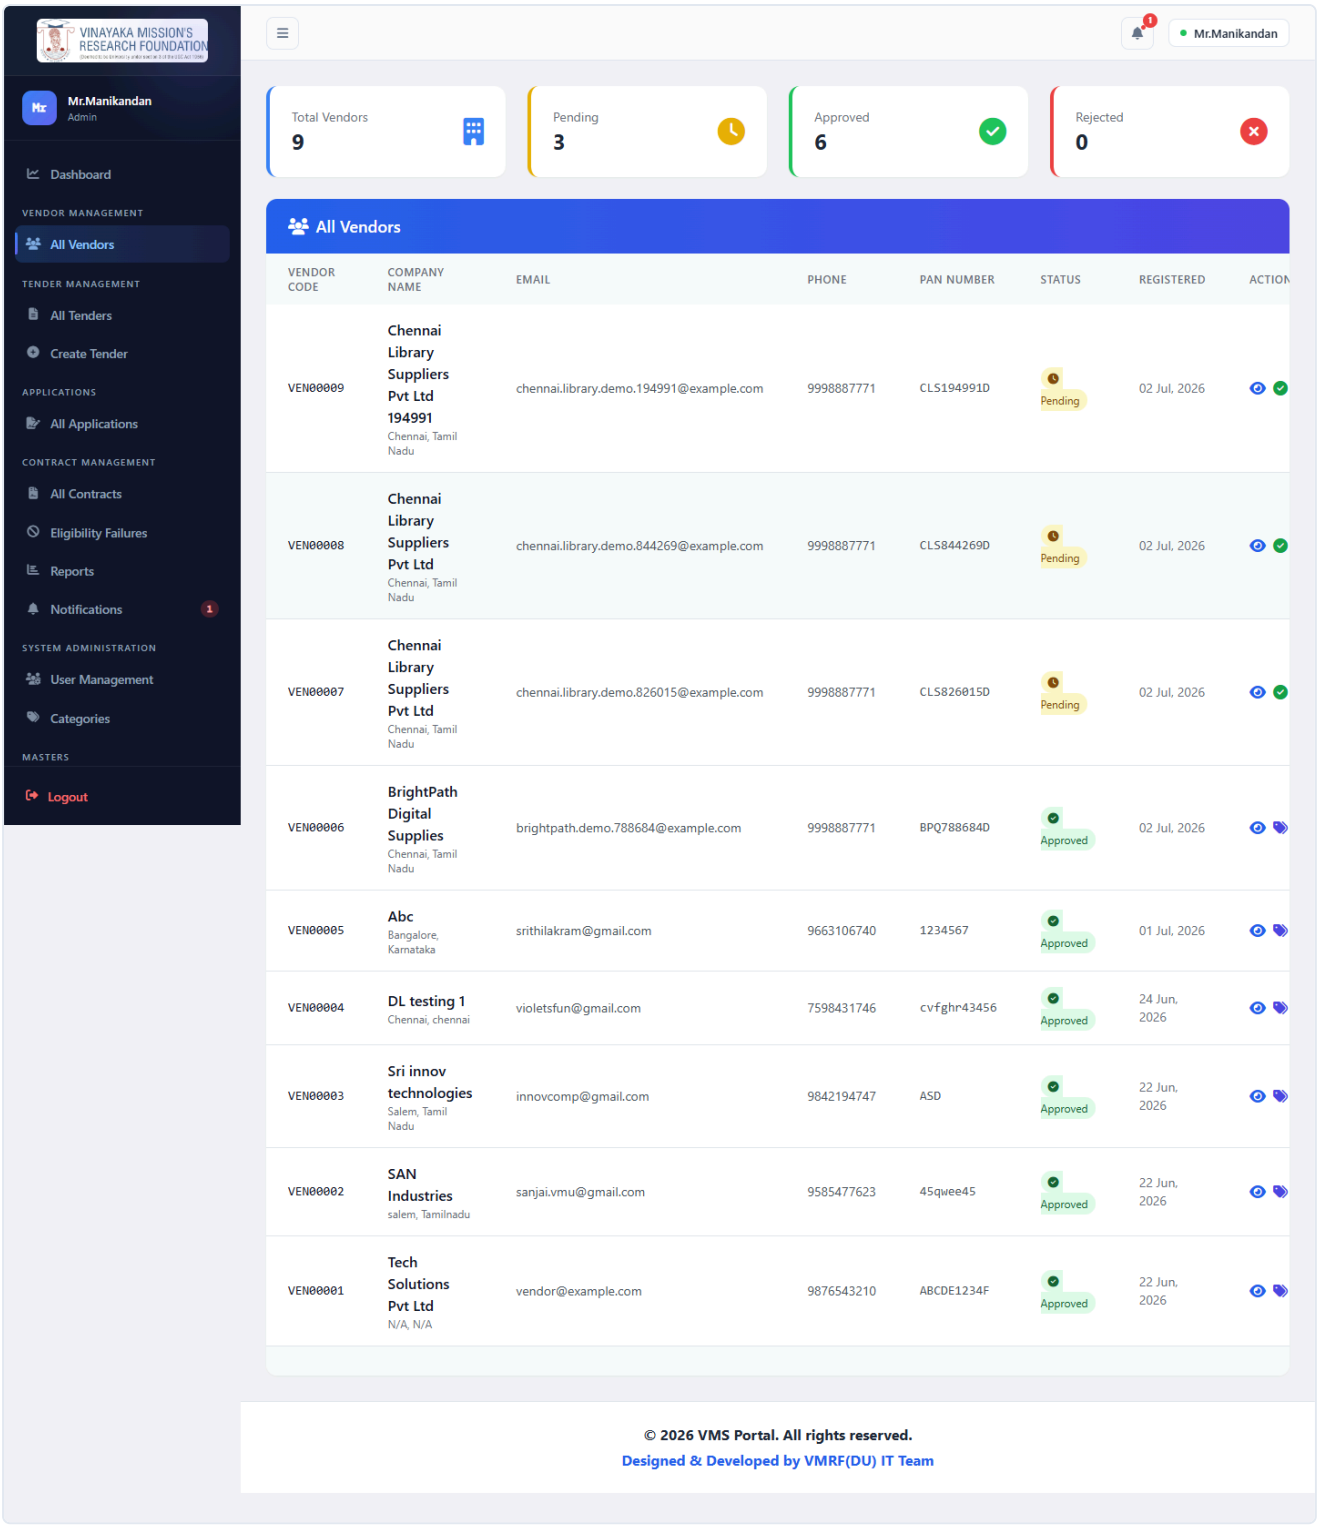

Step 1 — New vendor self-registers

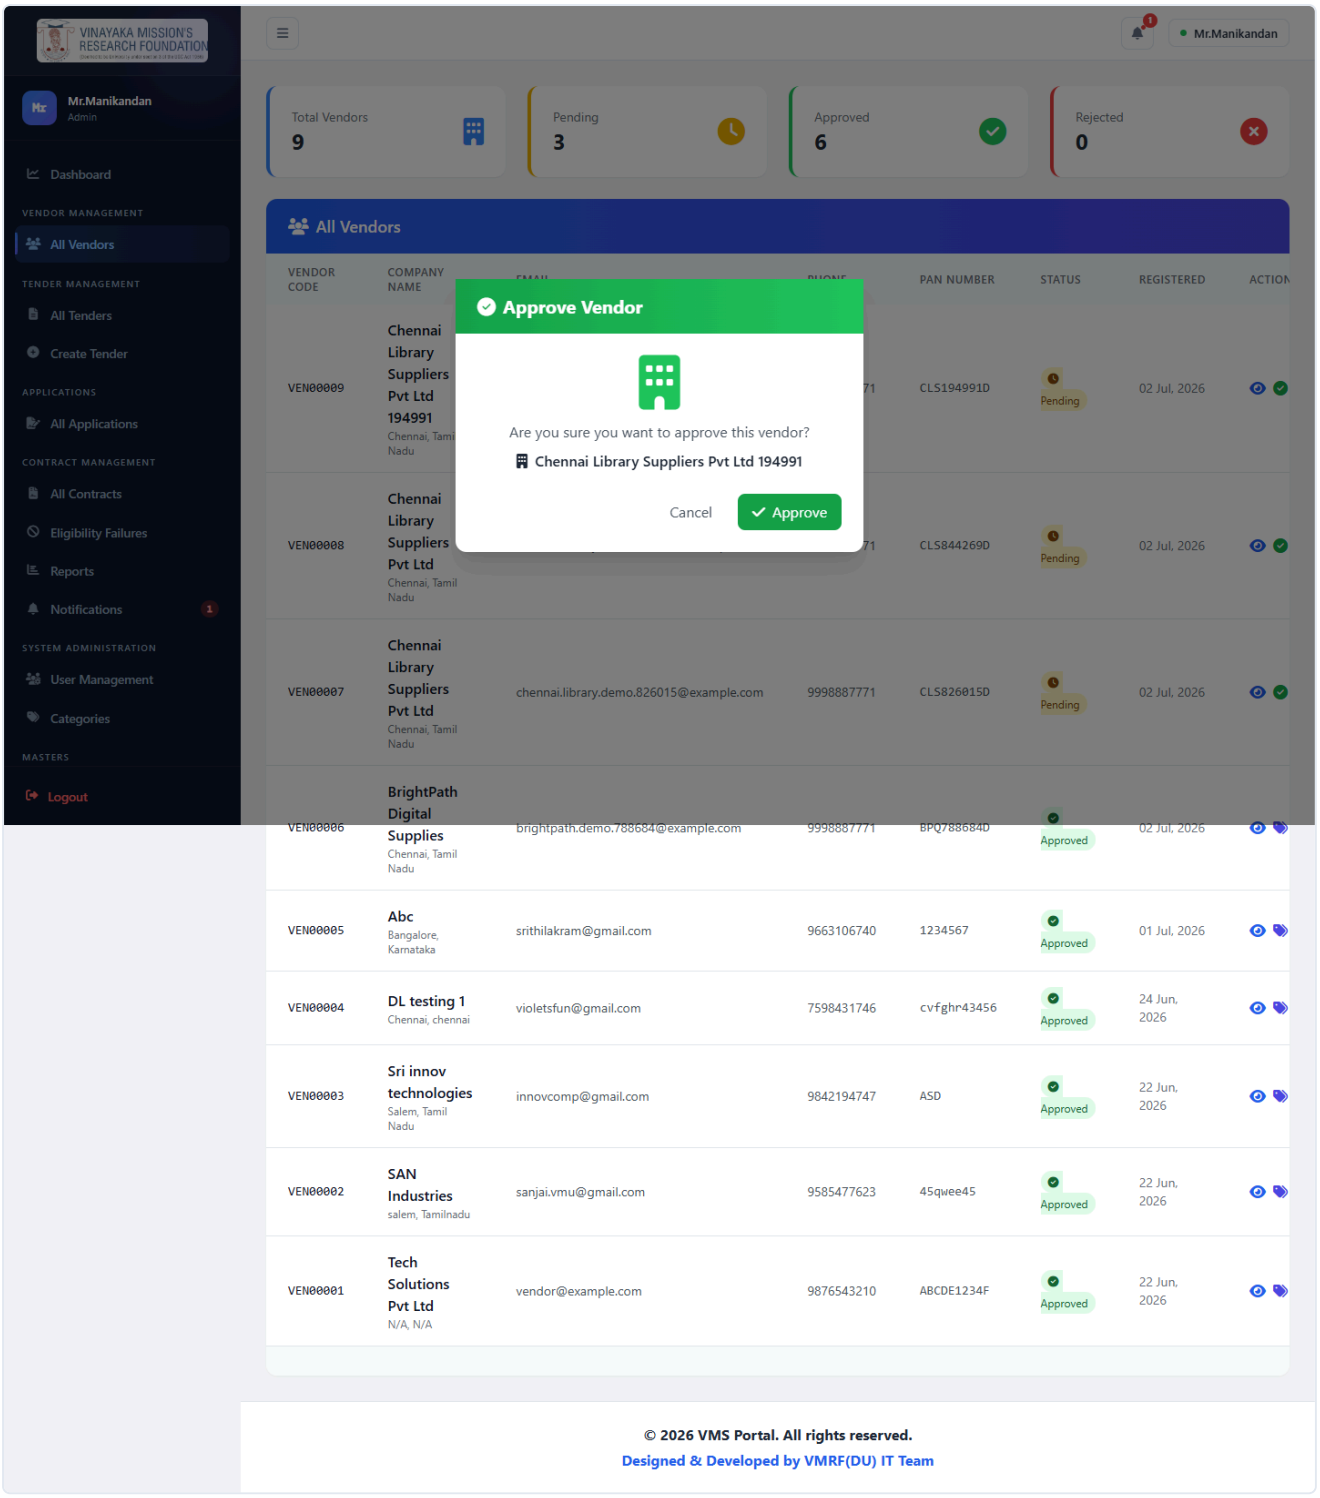

"Arjun Mehta" registers "Chennai Library Suppliers Pvt Ltd" (no GST, one MSME-style certificate uploaded instead — exercising the alternate-to-GST path).

Empty form	Filled form	Success
		

Step 2 — Admin approves the new vendor

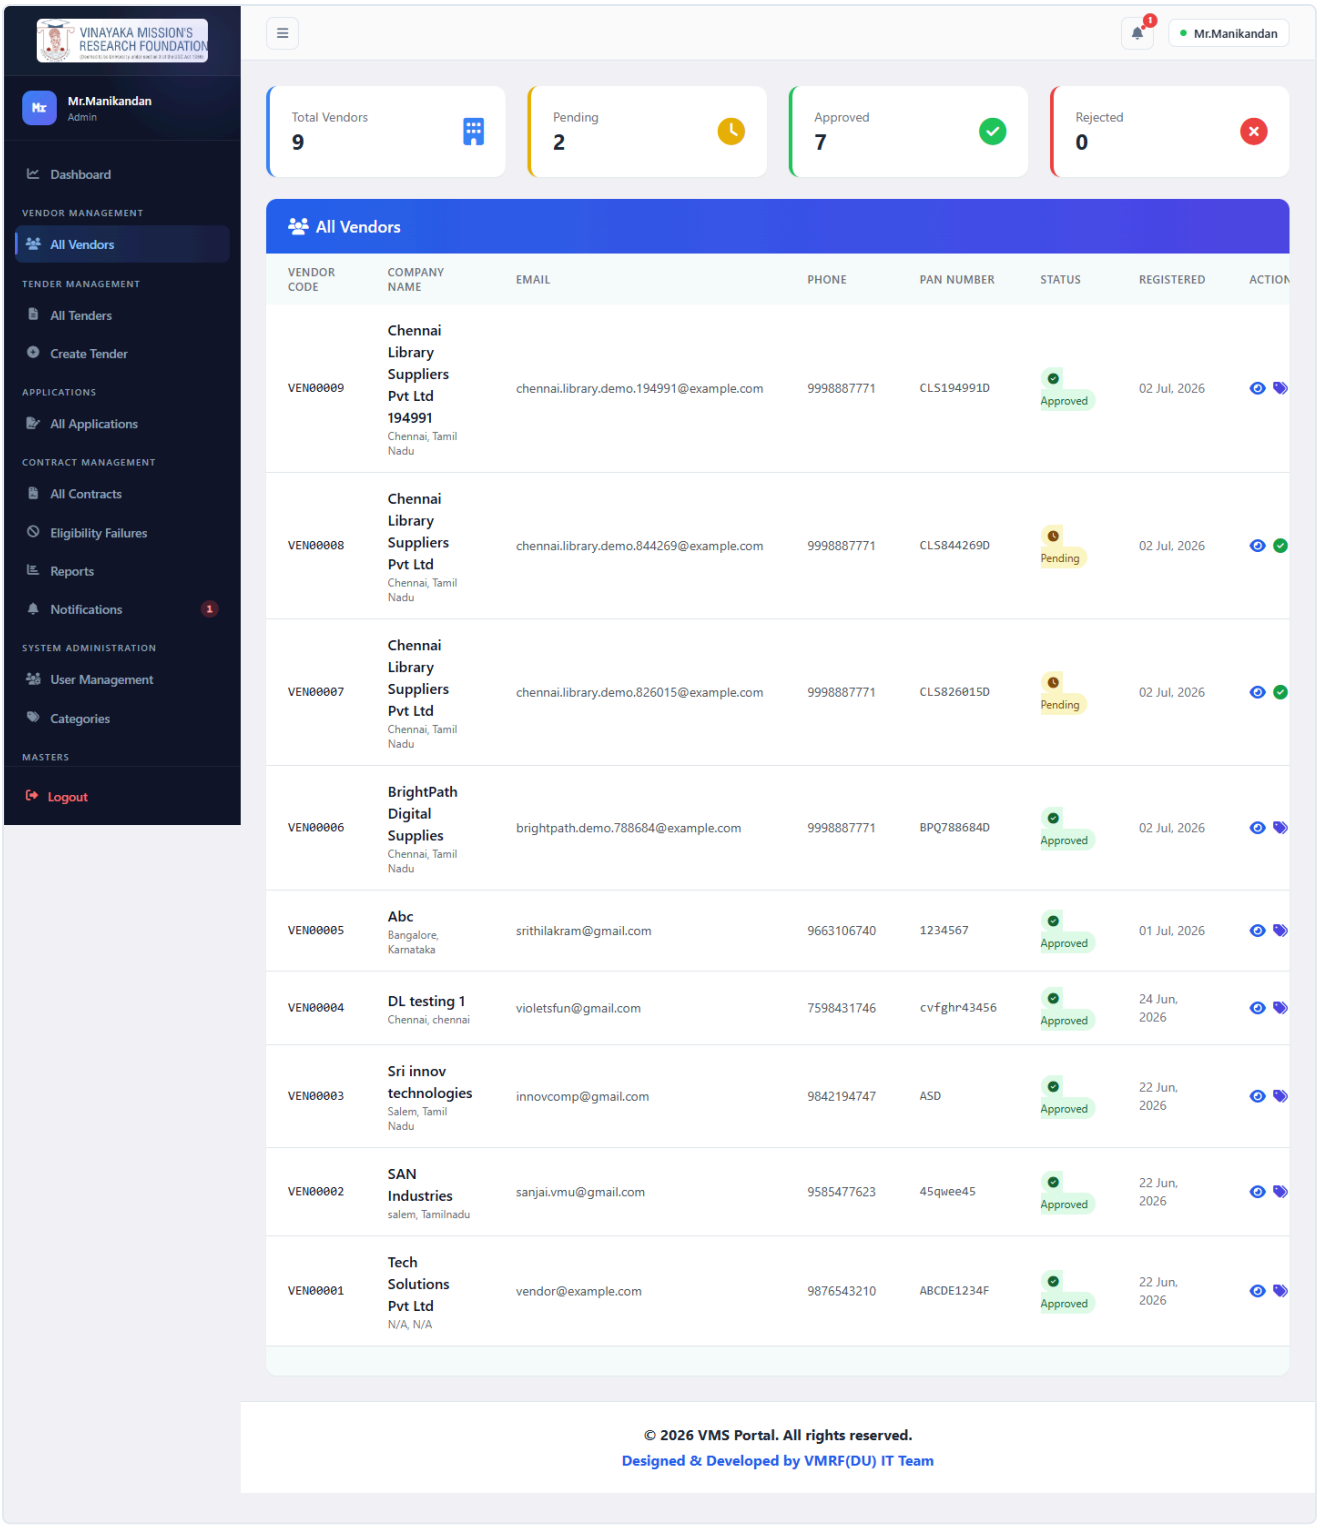

Using the now-fixed approve action — confirmed to actually persist this time, not just show a success toast.

Step 3 — Tender Owner creates a new tender

`test@gmail.com` creates **"Library Vendor Rate Contract"** (TDR-2026-0022) — directly mirroring the Digital Librarian's original request that started this whole project (§ project history, presentation deck) — with two eligibility questions built inline: one radio question that gates eligibility, one free-text reference-check question that's required but not eligibility-gating.

Empty	Questions built	Fully filled
		

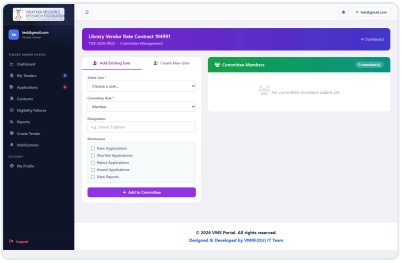

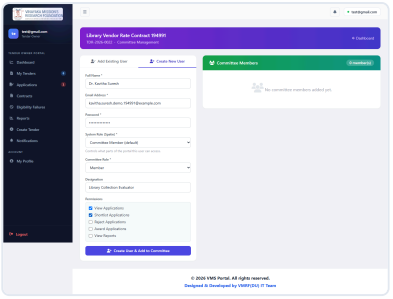

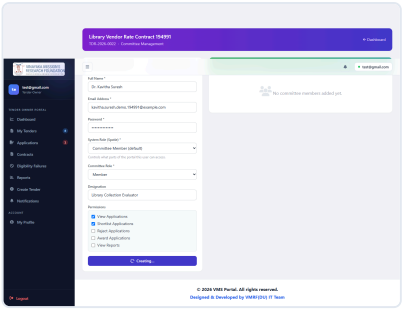

Resulting tender, still in draft — landing back on the Tender Owner's dashboard, which is where tender creation actually redirects to:

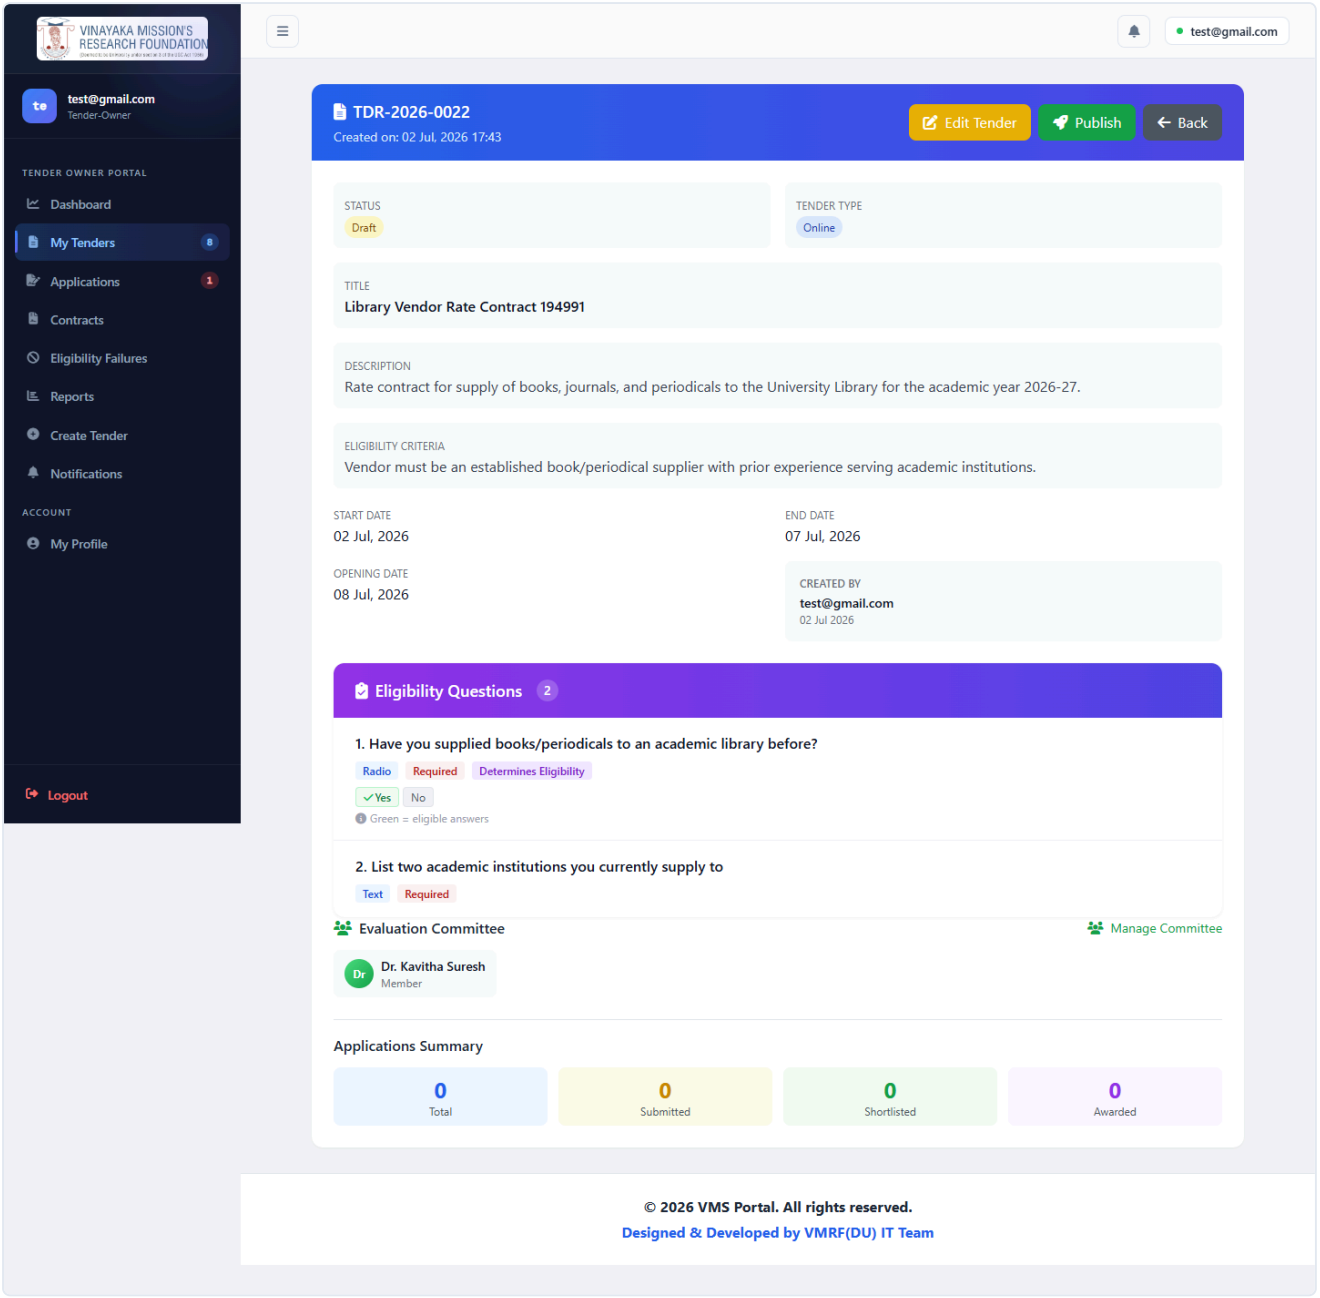

Step 4 — Committee member created live through the UI

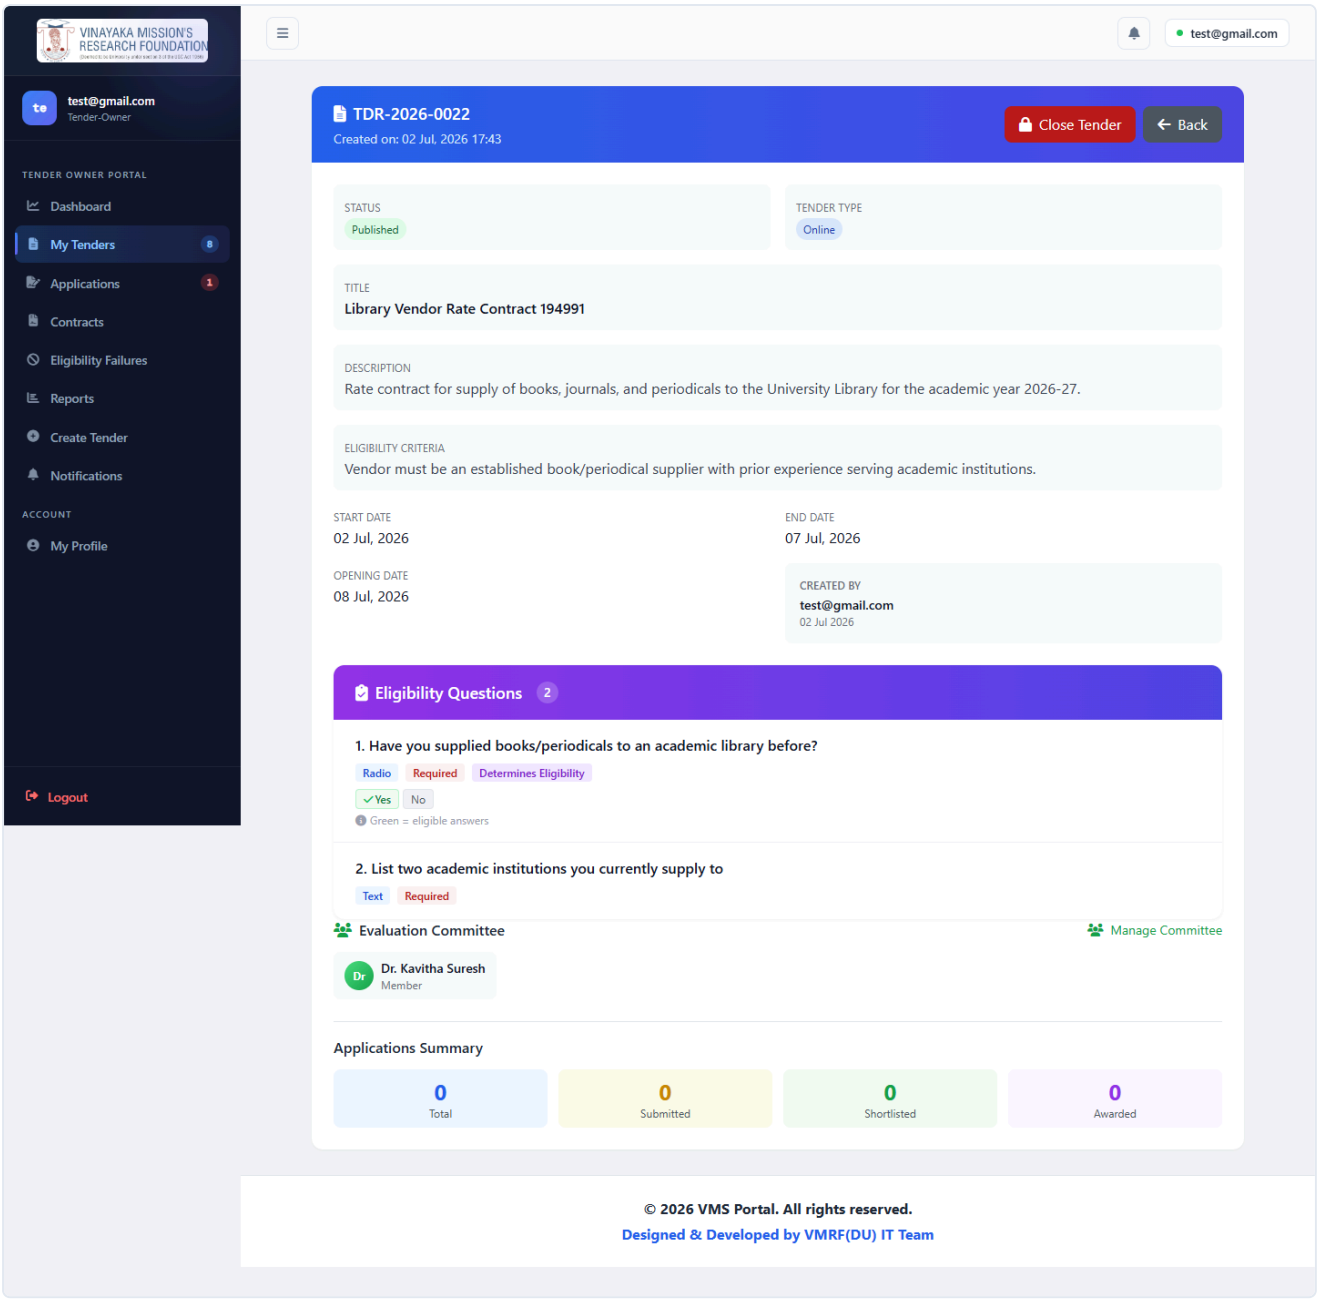

Using the "Create New User" tab on Manage Committee (not a shortcut — the real form), the Tender Owner adds **Dr. Kavitha Suresh** as a `committee-member` with `view_applications` +

`shortlist_applications` permissions on this tender specifically.

Empty	Filled	Added
		

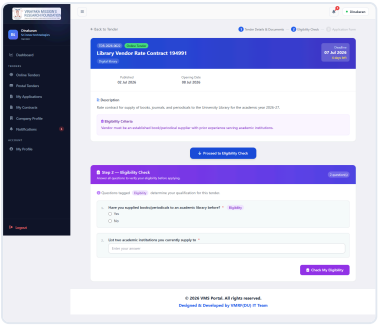

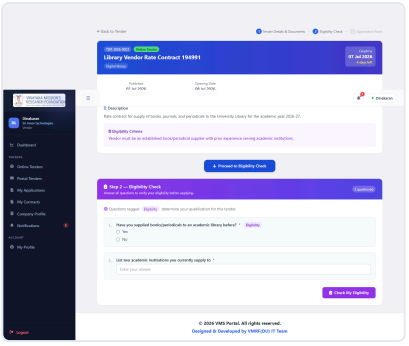

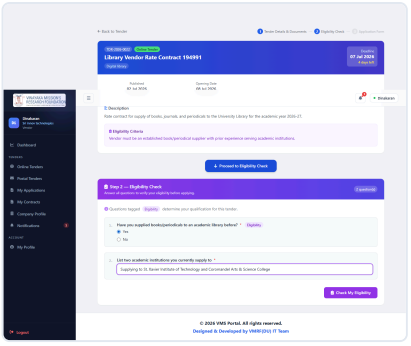

Step 5 — Publish

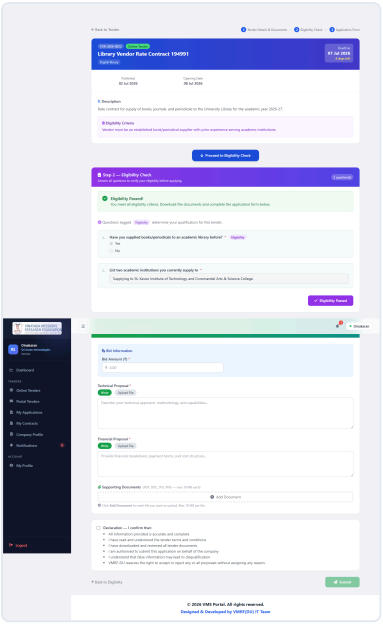

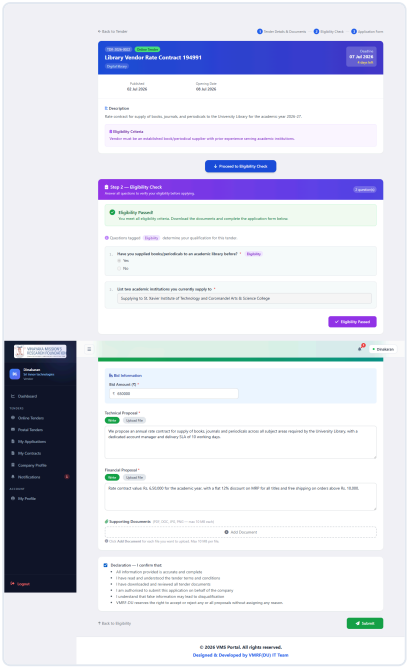

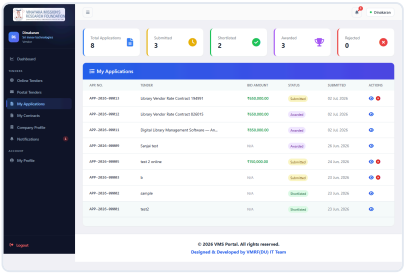

Step 6 — An existing vendor applies

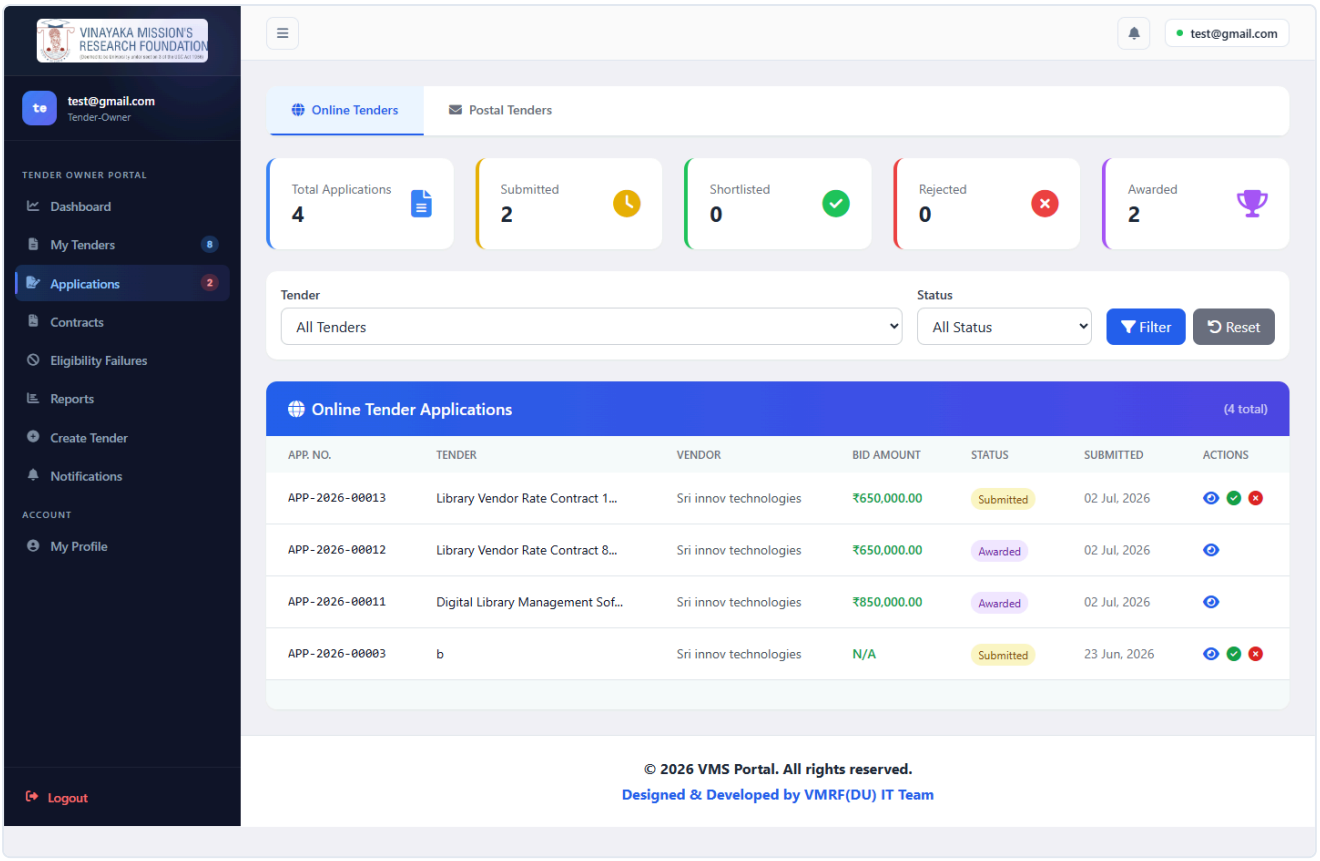

`innovcomp@gmail.com` ("Sri innov technologies") finds the tender, answers the eligibility question ("Yes, we've supplied to an academic library before"), passes, and submits a ₹6,50,000 rate-contract bid with a written technical and financial proposal.

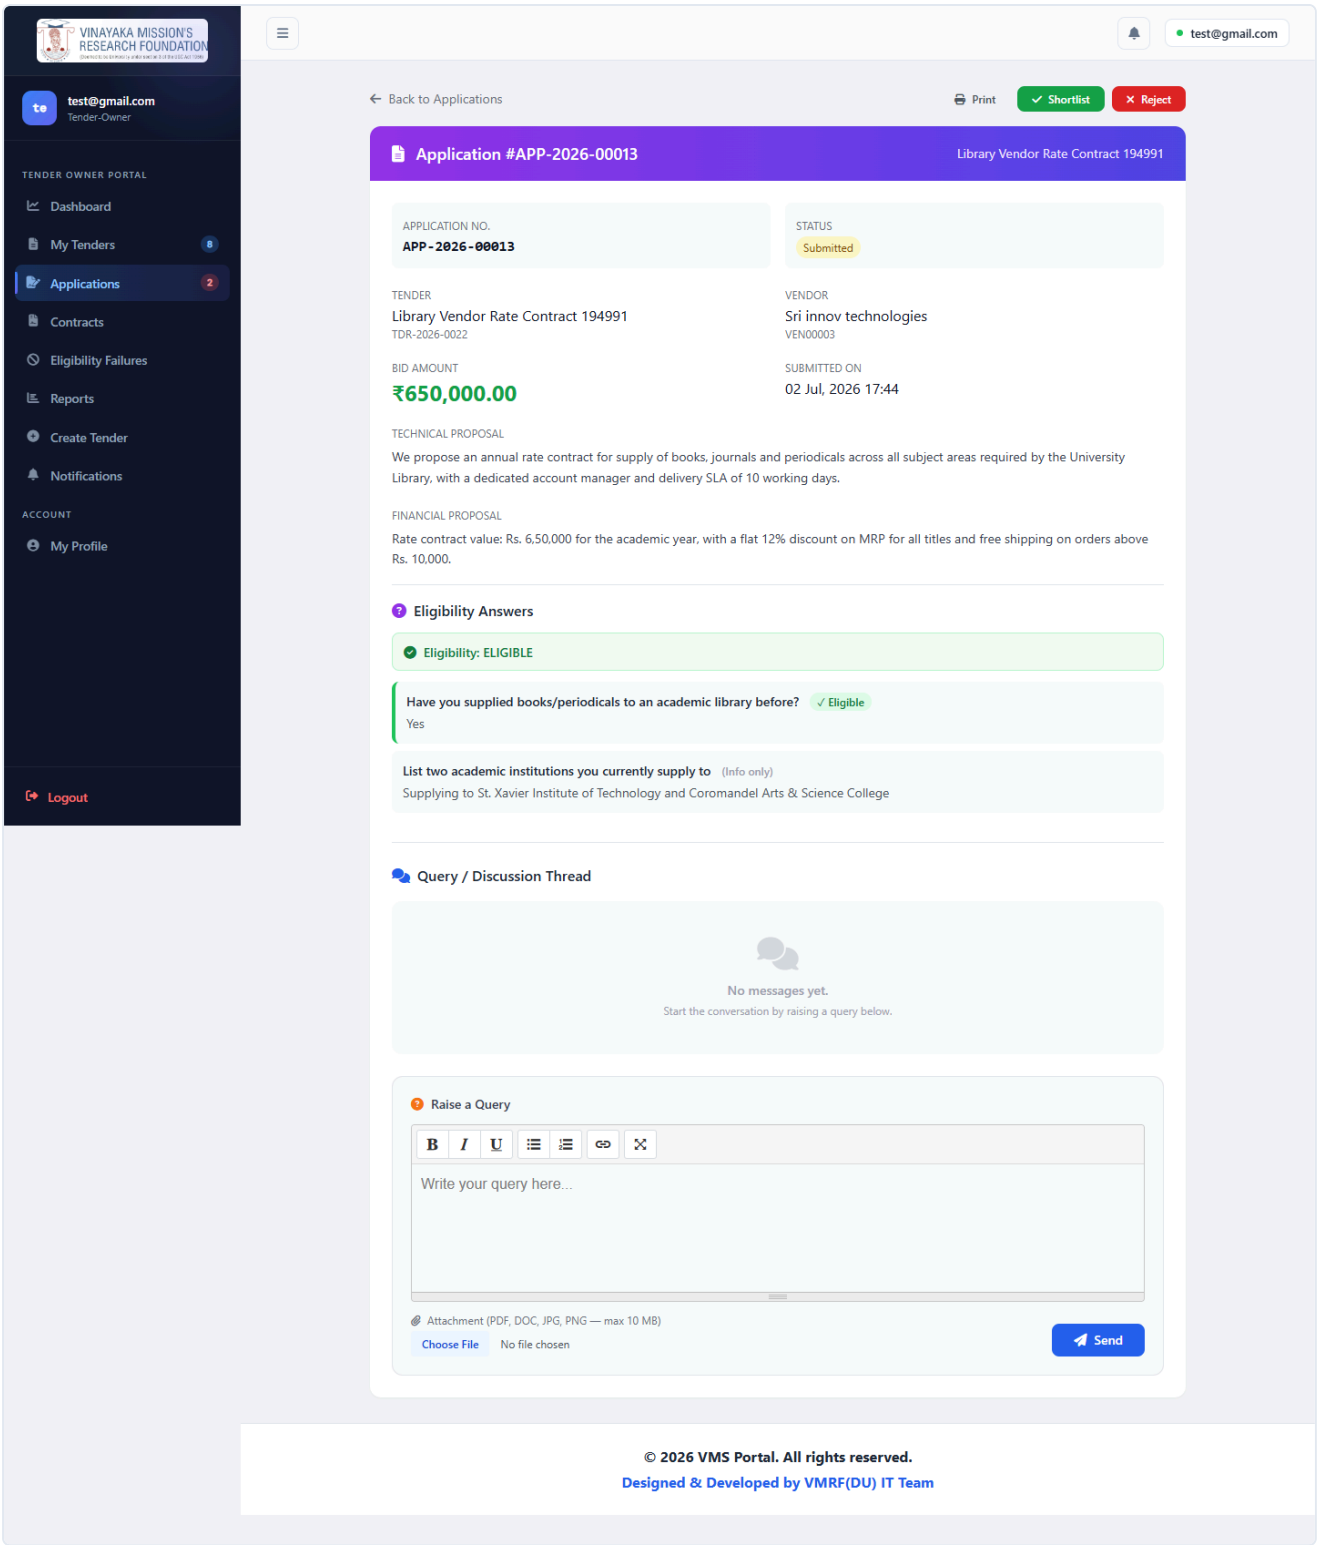

1. Tender details	2. Eligibility (empty)	2. Eligibility (filled)
		

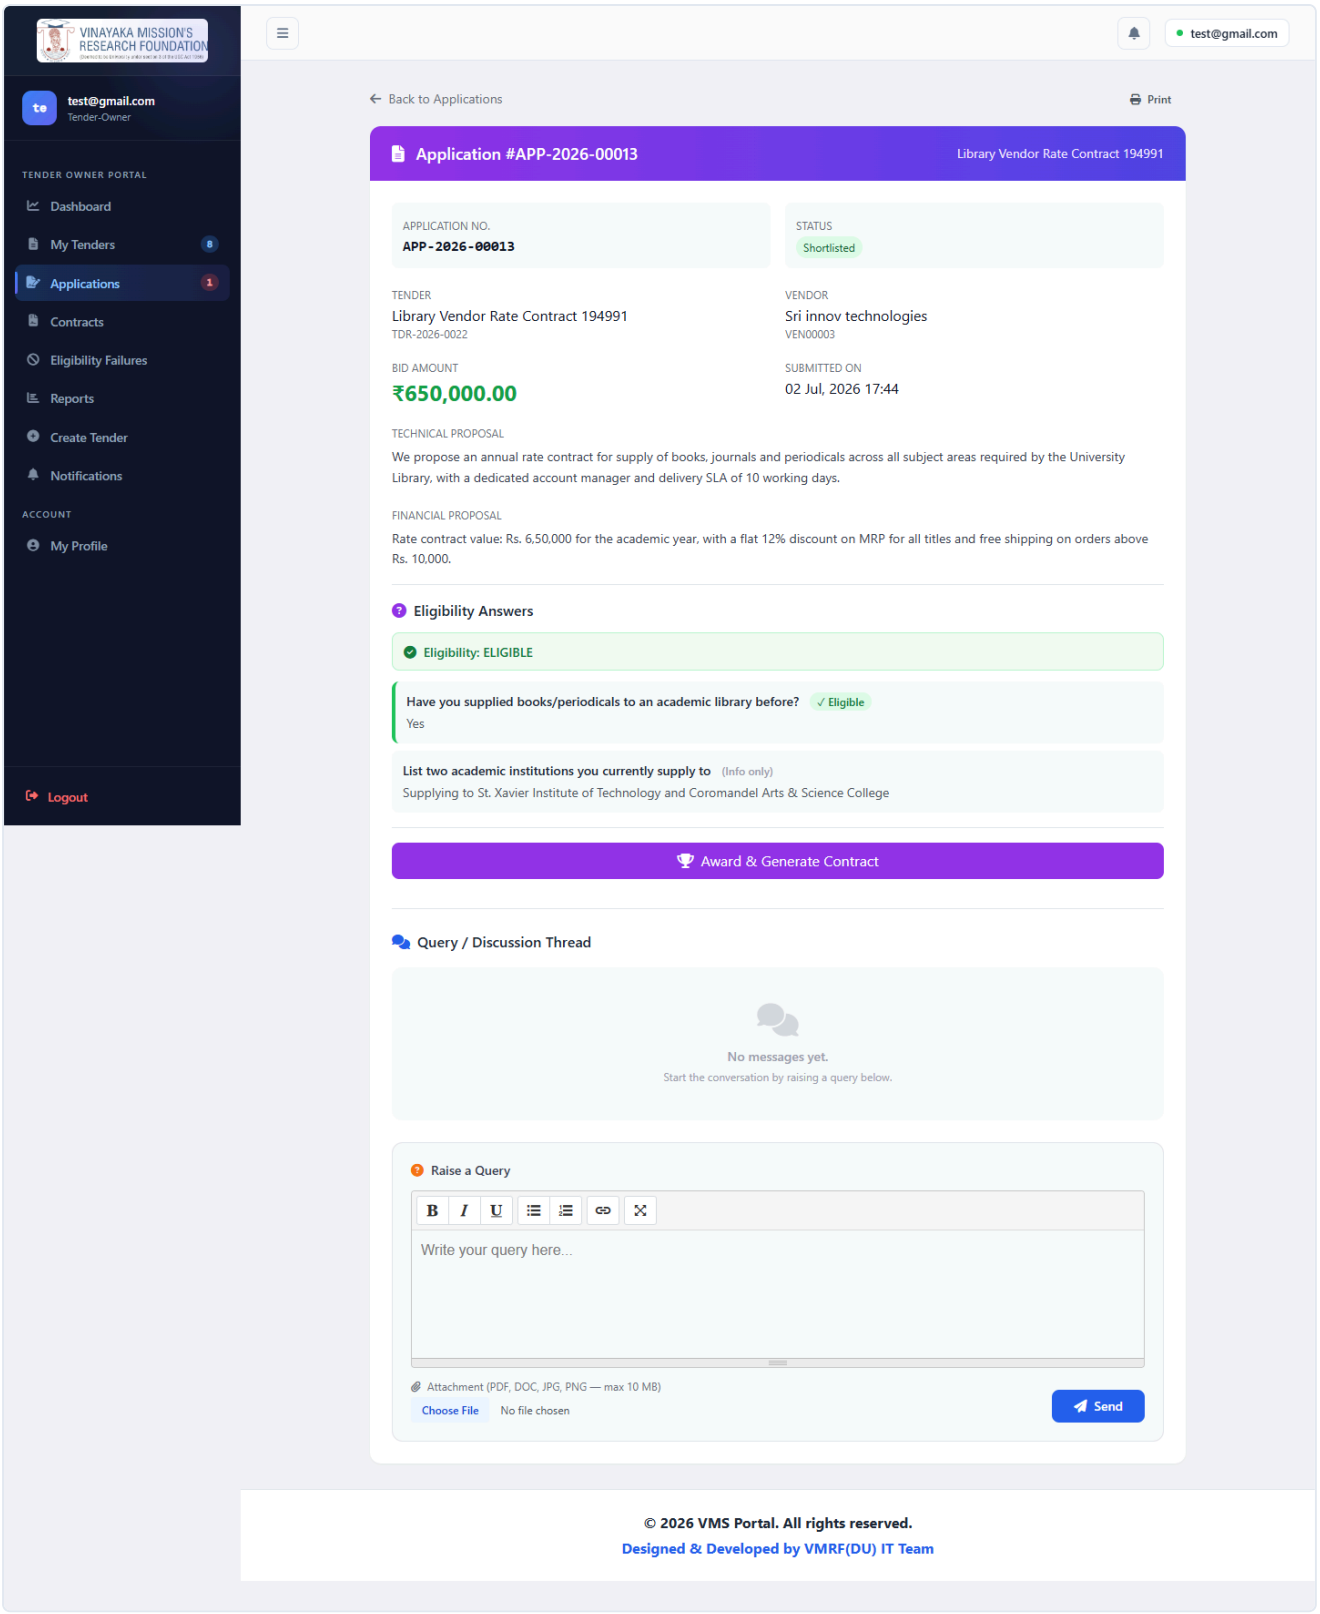

Eligibility passed	3. Application filled	Submitted — application received
		

Step 7 — Tender Owner reviews, shortlists, and awards

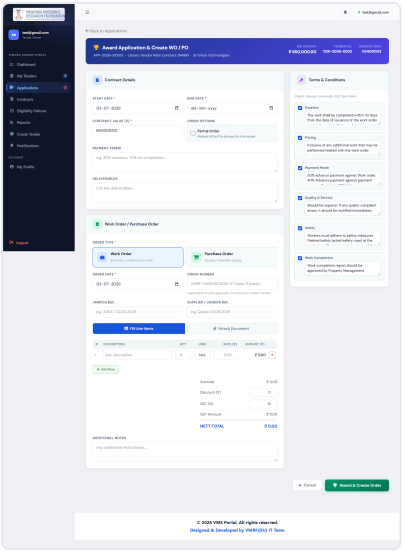

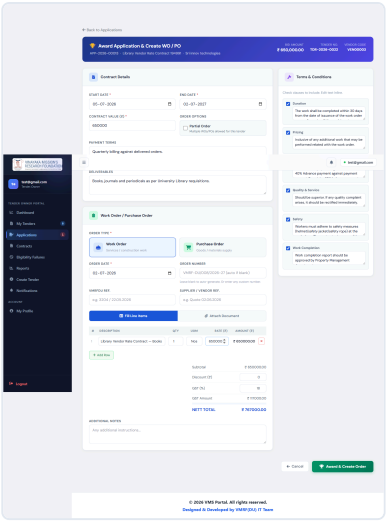

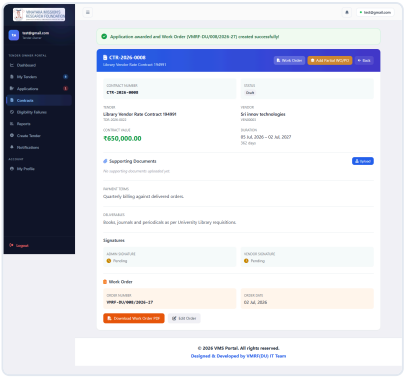

The application (APP-2026-00013) shows up as **Received**. From here it's shortlisted, then awarded — exactly the two-step decision the system is built around.

Award reached from the Applications **list** page's trophy icon (not the detail page — see §8 diagram 5):

Award form (empty)	Award form (filled)	Result: contract + Work Order
		

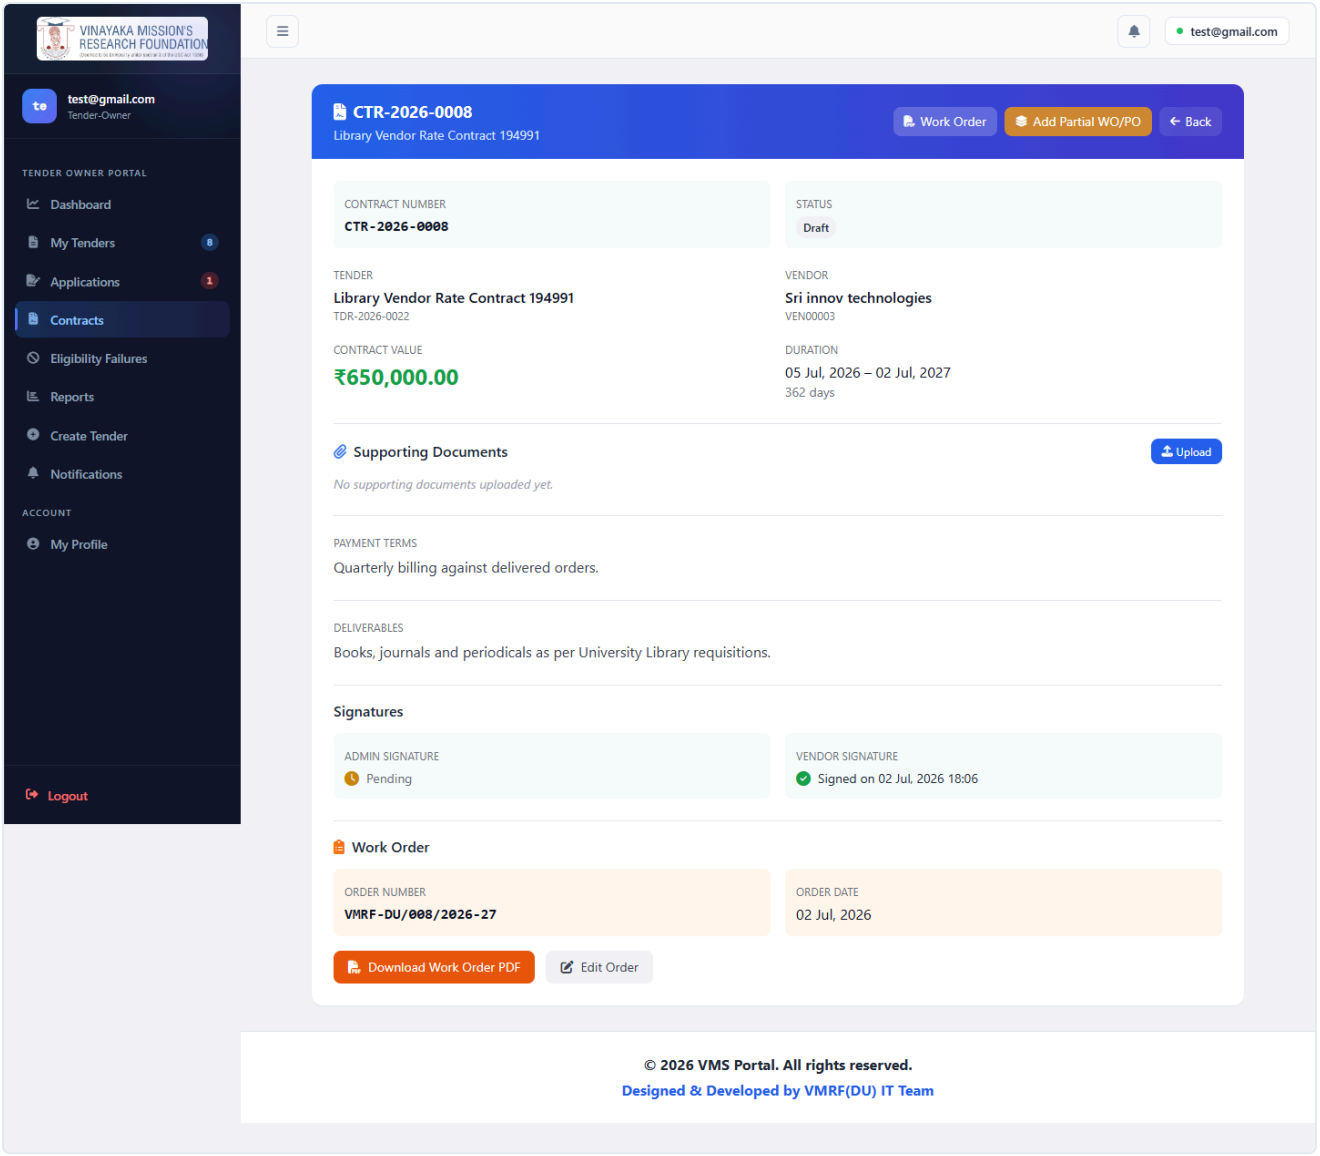

Step 8 — Vendor signs the contract (and the signing gap becomes visible)

Contract CTR-2026-0008 was created in `draft` status — this tender had "Require Contract Signing" checked, so it needs a signature before it's active.

The vendor's signature is recorded immediately. But looking at the same contract from the Tender Owner's side — the exact open issue described in §12:

Status: still **Draft**. Vendor Signature: ✅ Signed. Admin Signature: still shows **Pending** — and there is no button on this screen to change that. This is the contract-signing gap from §12, caught in the act rather than inferred from reading code.

---

14. Appendix: Test Credentials & Routes

Credentials used in this review

Role	Email	Password	Notes
Admin	`purchaseofficer@vmu.edu.in`	`password123`	Used for real login + real actions throughout §13
Tender Owner	`test@gmail.com`	`123456789`	Used for real login + real actions throughout §13
Vendor	`innovcomp@gmail.com`	`1234567890`	"Sri innov technologies" — used for real login + real application in §13
New Vendor (demo)	*(generated, timestamped)*	`DemoVendor@2026`	"Chennai Library Suppliers Pvt Ltd" — created live in §13, additive only
Committee Member (demo)	`committee.demo@example.com`	`password123`	For static §7 screenshots
Committee Member (live)	*(generated, timestamped)*	`Committee@2026`	"Dr. Kavitha Suresh" — created live in §13 through the real UI

Route prefixes

- `/login`, `/register`, `/forgot-password` — public
- `/admin/*` — Admin
- `/tender-owner/*` — Tender Owner
- `/committee/*` — Committee Member
- `/vendor/*` — Vendor
- `/profile` — shared by all authenticated roles
- `/api/public/tenders*` — unauthenticated public API (rate-limited, CORS-enabled) — see §10

Screenshot inventory

- `screenshots/` — 62 static reference screenshots (all roles, every screen), named by role prefix

- `screenshots-live/` — 30 screenshots from the real, scripted end-to-end walkthrough in §13
- `flowcharts-img/` — 11 rendered diagrams referenced throughout this manual
